App prototyping example 1

BetterMe: a course-listing application that helps people find courses and workshops in a convenient way

Requirements

- Course list (sort by popular, nearby, upcoming, for you)
- Search (filter by category, type, price range, location, rating etc.)
- Instant message (for inquiry)
- User profile (gamification, to learn list)

User persona

Martha White

Age: 50-55

Married with two kids

Housewife

Hobbies: Painting, Yoga,
Cooking.

Needs & Goals

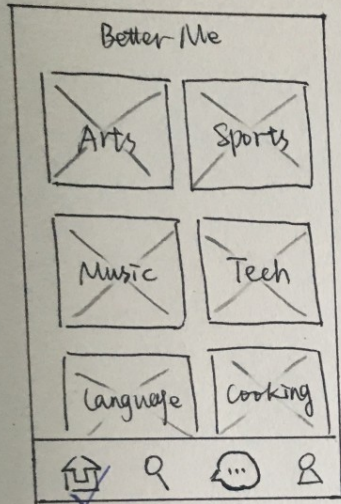

- Spend time on meaningful things
- Meet young people and know latest trends
- Pick up past hobbies
- Live a healthy lifestyle

Behaviours

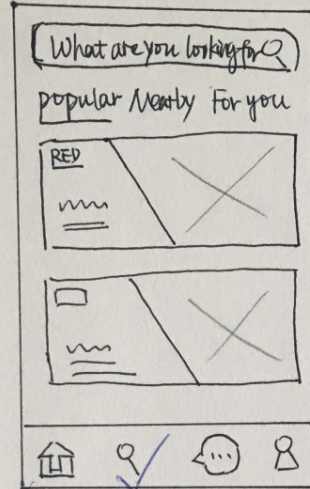

- Has lots of time to learn new skills
- Feels overwhelmed when doing google search
- Trusts other people's recommendations

"Now that all my kids are in college, I have more time to do my own things. But it's hard to find courses that suit me."

App prototyping example 2

Peddo: a bike-sharing app that supports an easy and healthy way to commute

User research

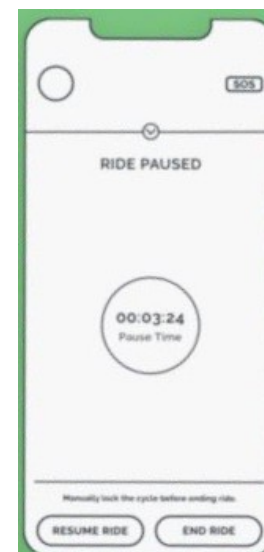

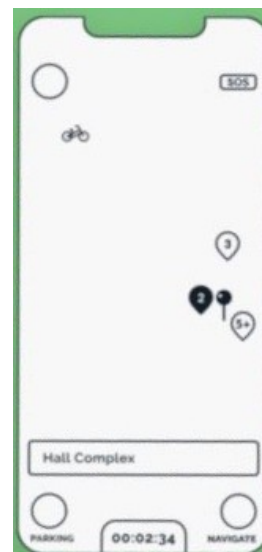

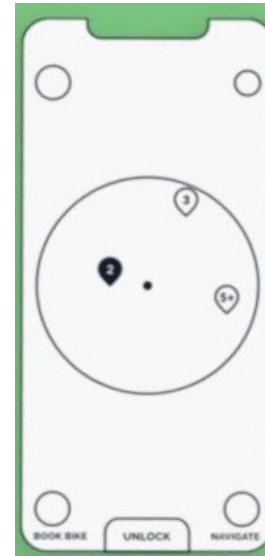

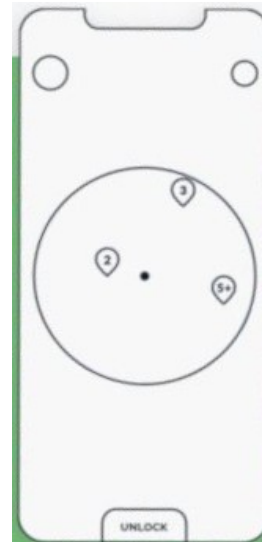

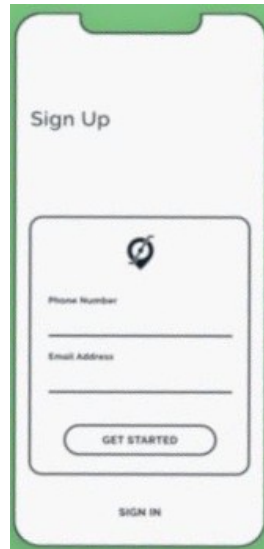

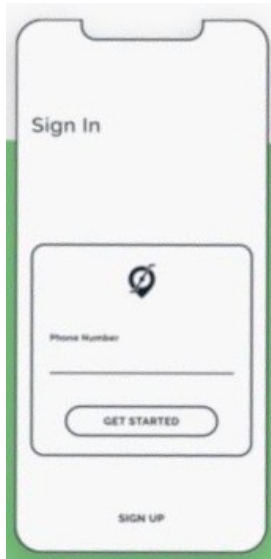

- Contextual inquiry/analysis with users of other bike-sharing apps

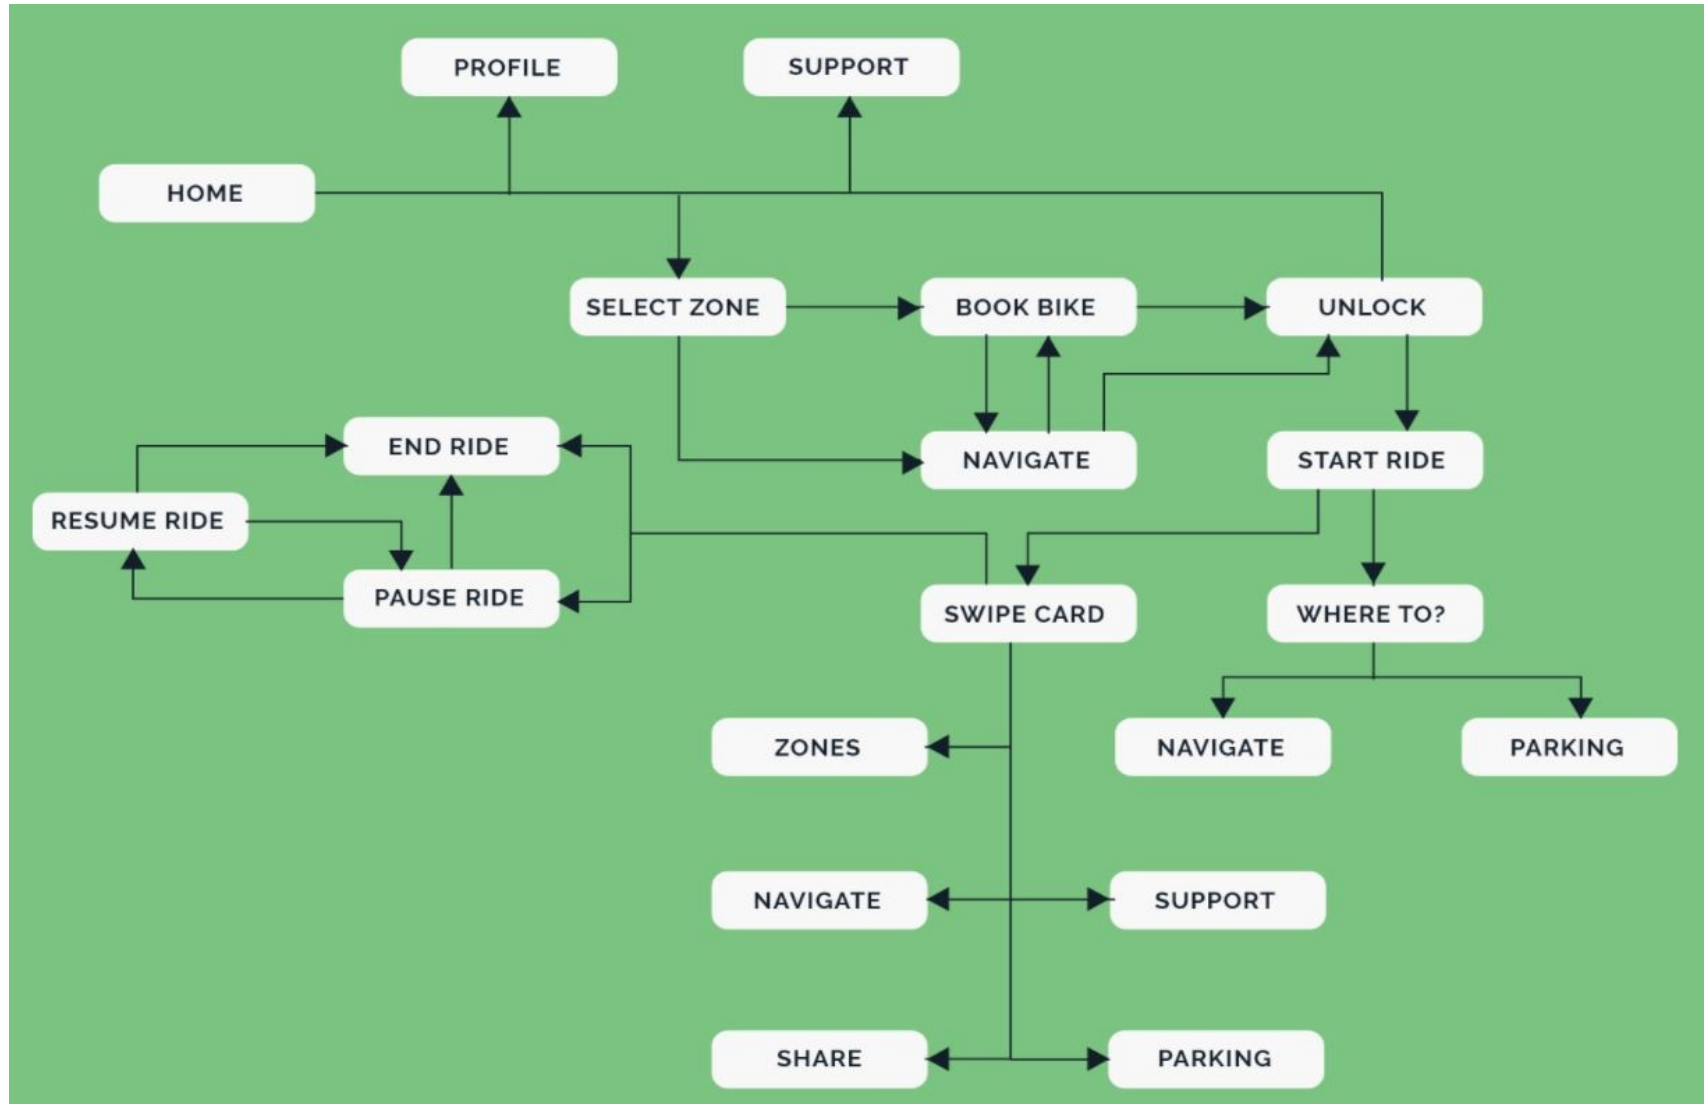

Requirements

- Find available bike-sharing spots in an area
- Book bikes
- Simplify bike unlocking
- Support navigation to bikes and other destinations
- Monitor bike use

Hi-fi prototype

App prototyping example 3

Sleepr: helps young adults control their sleep procrastination by customizing a screen time plan for the apps they enjoy using while in bed

User research

- Six 30 minute interviews with young adults ages 18-25 to gather data about the participants attitudes and behaviors towards their current sleep habits, as well as their use of technology before bed

Daytime and Nighttime Routines

Young adults have fairly consistent daytime routines, with more set morning routines, but unstructured night routines.

They spent the most time outside during weekends, and their bedtime routines almost always includes scrolling on their phones as the main activity.

Sleep Friendly Tech

Young adults are making their technology more sleep friendly by using features such as night mode, do not disturb, and lowering their screen brightness at night.

However, they don't find a need to go beyond these features, even though they are more self-aware about their sleep.

Sleep Quality

Overall, young adults are reporting sleeping late, with an average going to bed between 1 and 2 a.m. As well as feeling tired throughout the day.

However, time to fall asleep, and sleep duration are within a reasonable range for all. 12.5 mins and 7.25 hrs, respectively.

Sleep Procrastination

Young adults are using their devices in bed, and some recognize how this negatively affects their sleep.

Most say they do it because they need something to fall asleep to, while others say they are trying to consciously avoid doing it.

Early Sleep Time

Young adults wish that they had an earlier sleep schedule, so they could go to bed early, wake up early, and be more productive in the morning.

Even the self-proclaimed night owls in the group.

User personas

"I'm making a more conscious effort to not scroll on my phone in bed. I think it takes me less time to fall asleep, and I feel more rested. The thing is that I like to read on my phone at night and have something to fall asleep to"

Lucy Chang

Age: 22

Location: Vancouver, BC

Education: Bachelors Degree in Comp. Sci.

Occupation: Front End Developer at AWS

Sleeping Habits:

- Goes to bed at around 12 a.m. everyday
- Sleeps at around 1:30 a.m. almost everyday
- Gets around 7 hours of sleep on average
- Takes 15 mins to fall asleep on average

Bio:

Lucy is a recent graduate working as a Front End Developer for AWS. Now out of school, Lucy's 8+ hour work days have placed new challenges on her sleeping habits. A self-proclaimed "night owl" during college, Lucy now wants to be able to sleep earlier to feel better throughout the day. She finds that without her phone in bed she feels bored, and unable to get rid of all her notifications.

Lucy is frustrated because it seems that no matter how many attempts she makes at sleeping early, she doesn't actually fall asleep until after 1 a.m. This has made her mornings feel rushed and unproductive, making her feel tired during the second half of the day. Recently she read an article which led her to cut out coffee, go for walks around Stanley Park, and activate "nightmode" and "do not disturb" in all her devices to sleep earlier.

Bedtime Behaviours:

- Spends a total of 30 to 90 minutes on her phone lying in bed before sleep
- Checks Gmail, WhatsApp, and Messenger to answer messages she couldn't get to during the day
- Tries to avoid mobile games because they increase her heart rate and make it harder to fall asleep
- Goes on Instagram and TikTok because the "scrolling" lets her pass the time easier
- Lowers screen brightness and turns on nightmode to watch YouTube or read on Kindle/Medium apps.

Personal Goals:

- Wants to go to sleep earlier to be more productive in the morning
- Wants to feel like she has more time and energy to do other activities outside of work during the day
- Avoid having to rely on coffee again as she did throughout her university years

Pain Points:

- Wishes that going to bed early would lead to falling asleep earlier, rather than past 1 a.m.
- Wishes she wouldn't feel bored in bed without her phone
- Wishes that she wouldn't have a dip in energy in the second half of her day

Hi-fi prototype

App prototyping example 4 (revamped app)

PetCare: a mobile app that helps you take care of your pet while communicating with others within your household about the pets needs

more info at: <https://medium.com/@megan.jones38.mj/ui-ux-case-study-petcare-app-bb5fecf389f9>

Initial concept and persona

- PetCare is a Pet Management App that can help pet owners to manage their pets, feeding, appointments, medicine and grooming. Unlike Pet Care Diary, our product can help find the nearest vet/groomer for your dogs!

Stephanie Chan

Age: 21 Years

Family: Single mother, 1 younger brother

Pets: 2 Dogs

Study Level: Currently studying for Master's in Computer Science

Method of Communication :
Whatsapp, Voice Call, Gmail

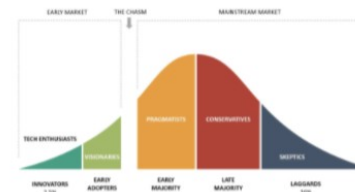

Pain Points:

- Pet Management
 - She has a notepad where she manages her pets needs but sometimes, she forgets where she puts the notepad, or she forgets to jot down her pets needs
- Confusion
 - Her life is always hectic so she always tend to confuse her 2 pets appointments, meals and etc...

Reading & Writing levels:

	Chinese	English
Reading	3/5	4/5
Writing	4/5	5/5

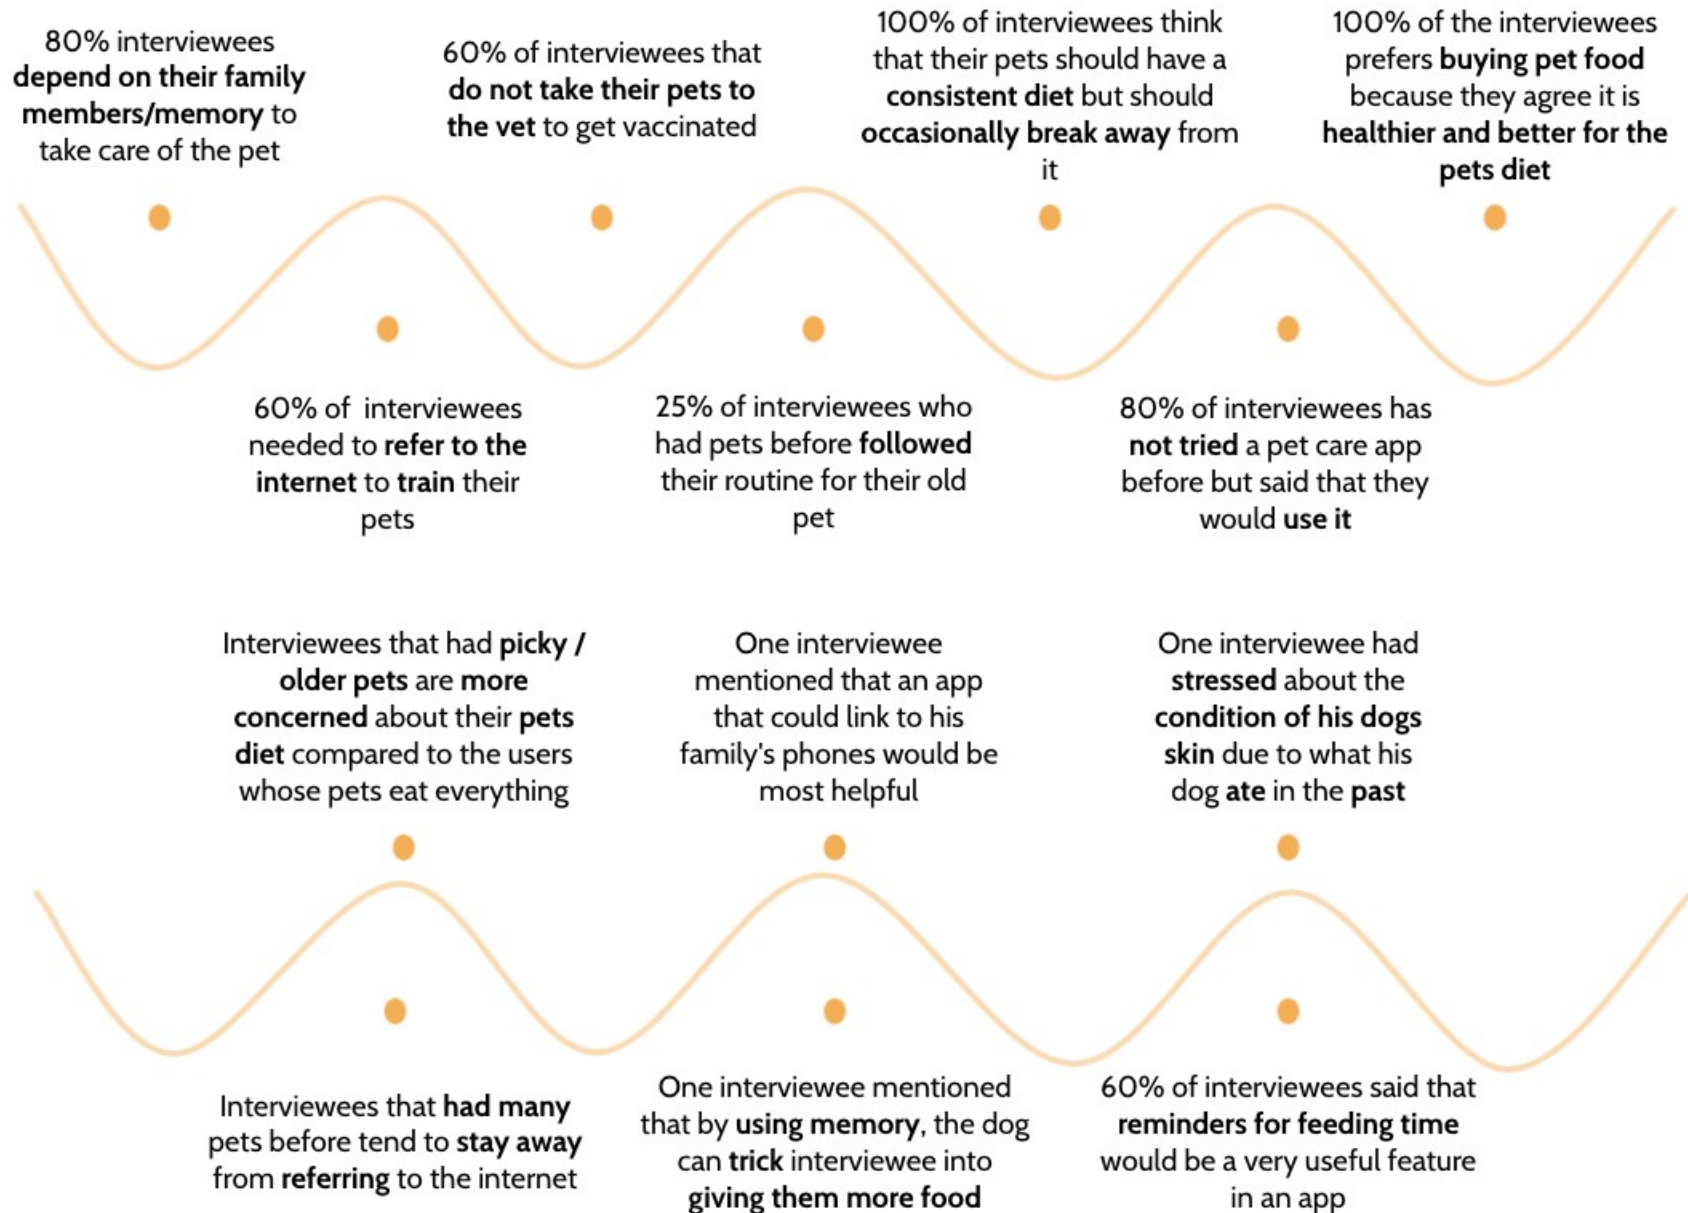

Early Adopter Curve

Goal & Aspirations:

Stephanie strives to give her dogs the best because she consider her dogs to be her family.

User research: interviews

Validated concept and persona

- PetCare is an app that can help pet owners manage their pet food supply as well as notify them when it's feeding time. Unlike PetCare Diary, our product can help remind and encourage pet owners and family to take care of their pets and assign roles to each other.

Stephanie Chan

"My dogs are also my family"

Age: 19 Years

Family: Mother, Father, 1 younger brother

Pets: 2 Dogs (1 Shih Tzu, 1 German Shepard)

Study Level: Currently studying for Degree in Computer Science

Method of Communication :
Whatsapp, Voice Call

Pain Points:

- Mix up**
 - Sometimes Stephanie and her family will end up mixing her dogs appointments, medication or food.
- Tricky Dog**
 - Because she shares responsibility of her pets with her parents, they will feed her dogs but because Stephanie isn't informed, the dogs will look for her to feed them again causing them to be overfed
- Special needs**
 - Because she has 2 very different dogs, her dogs each need to have specific diets.

Reading & Writing levels:

	Chinese	English
Reading	3/5	4/5
Writing	4/5	5/5

Early Adopter Curve

Goal & Aspirations:

Stephanie strives to give her dogs the best because she consider her dogs to be her family.

Competitive assessment

	 PetCare	 Pet Care Diary	 11 Pets	 DogLog	 Pet's Diary
Visuals	Neat layout, Icons are understandable	Very cute icons	Has default typo A lot of Icons, confusing layout	Layout is neat	Cute Icons Layout is neat
Sign-Up		Confusing because it says you can start but goes back to the sign up screen	Easy and straightforward	Facebook or Google only	
Pets	Dog, Cat, Bird, Rodent, Fish, Rabbit, Spider	Cat and dog only	Dog, Cat, Rabbit, Hamster, Bird, Snake, Horse, Other	Dog only	Dog, Cat, Fish, Bird, Rodent, Other
Navigation	Very simple because icons are straightforward and understandable	Confusing if you're not used to it because app does not tell/indicate how to use the features	A lot of features in app but some features are under wrong category (eg Vaccination under care, not medical)	Navigation is ok, all the categories for dog care is under 1 subpage so it makes it easier for users to log events	Very simple but everything from reminders to notes is the same so there are unnecessary functions
Reminders	Through notifications	Through notifications	Through notifications	Through notifications	Through alarm on screen but if out of app, notification
Has pro version?					

PetCare Diary

Pros

Visually

- Very cute and clear icons

Usability

- Users don't need to type out common symptoms everyday
- Fast to input food, weight, water, etc.. and have an option to input detailed descriptions

Pet Care

- Gives out graphical data of pets food, water, weight, etc...

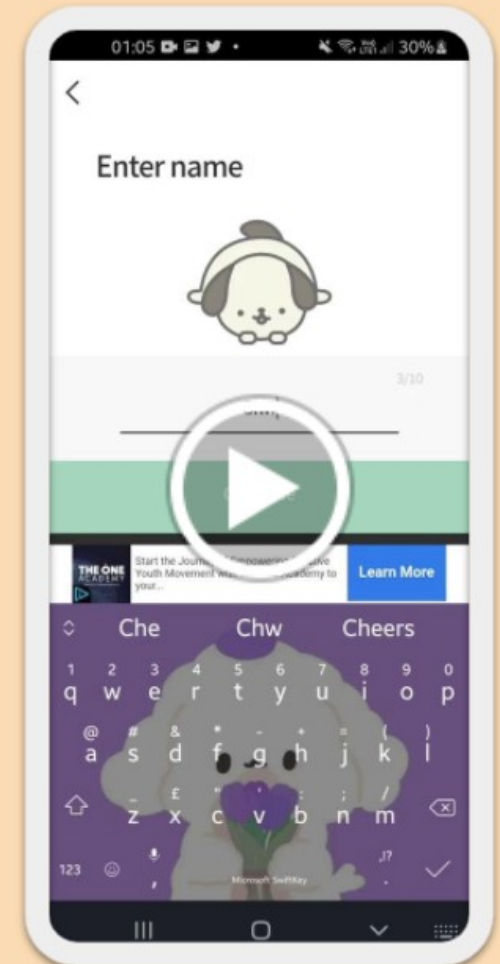

Cons

Pet Care

- No alternative animals other than cat and dog
- Medical test result features will be confusing to those who don't know what figures to input

Others

- A bit buggy, Korean words appear instead of English sometimes
- Need to go back to home page to switch pets which is inconvenient

Click to play

Current app analysis

Your pets screen

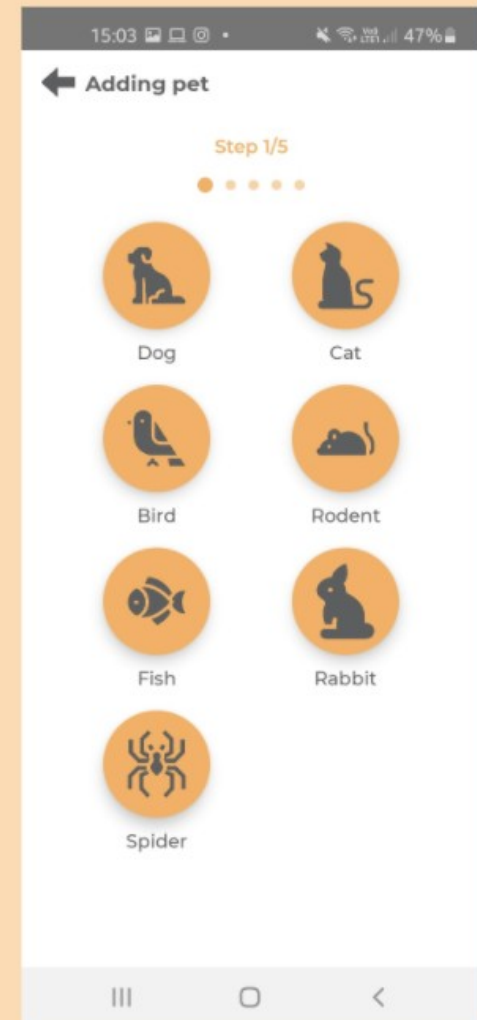

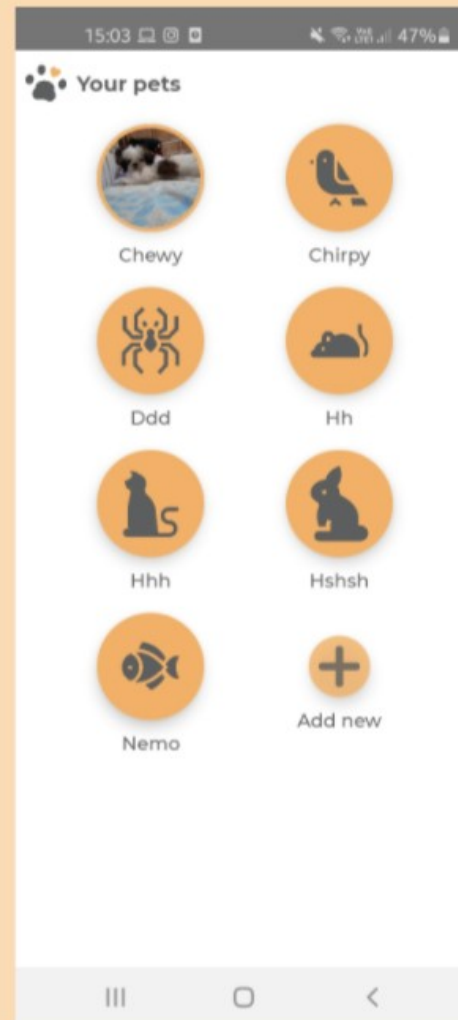

As soon as users get into the app, they enter the 'Your pets' screen which asks users to select a pet

Pet Selection

The pet selection is very straightforward and responds fast. Icons are straightforward as well and layout is simple so users can navigate well. I would like to see a filter option to be able to see specific types of pets such as cats or birds and I would also like to add a login feature.

Add Pets

When it comes to adding pets, it's also straightforward but there is no 'back' options so if you accidentally did a misstep, users need to restart and enter their pet details once more. More information can also be added as well as some adjustments to the current information such as a non specific birth date

UX Scorecard

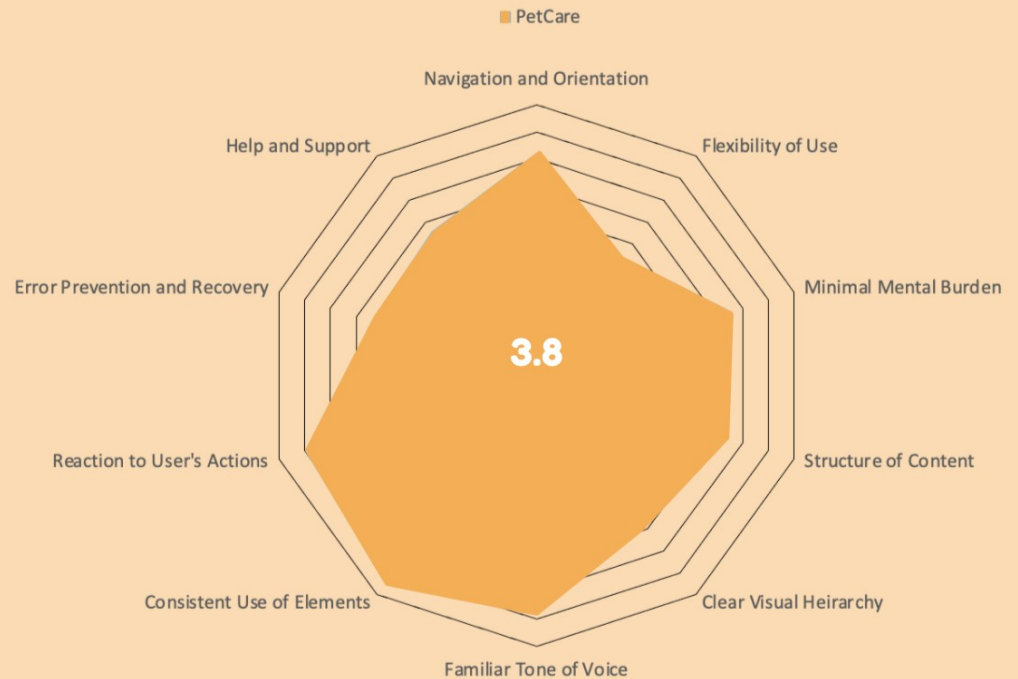

Visuals

The visuals of the app is consistent in the icons and the fonts used were consistent as well.

Overall, this app currently is too simple visually because of the lack of functions.

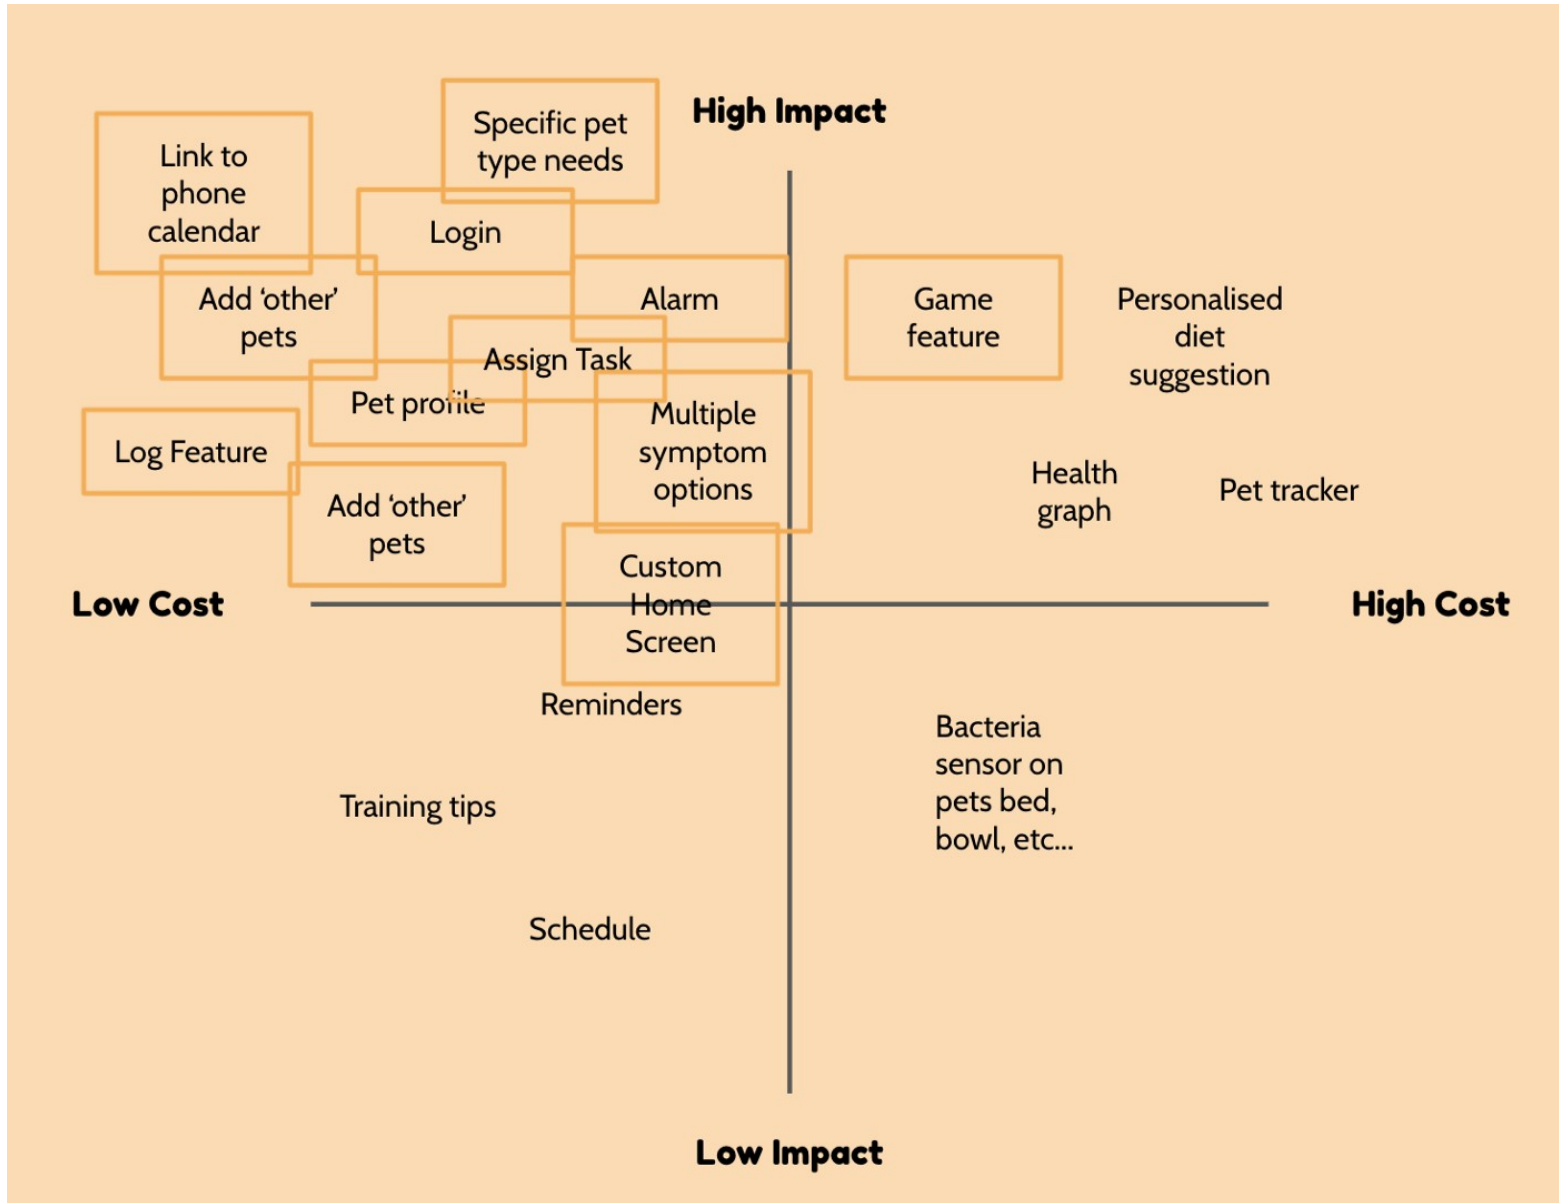

Usability

The app is just for reminders so there's not much use for the app besides that. Other than the reminder, there is the calendar which shows when future reminders will occur. Unfortunately this feature is just for the reminders which i think that it has more potential to be functional.

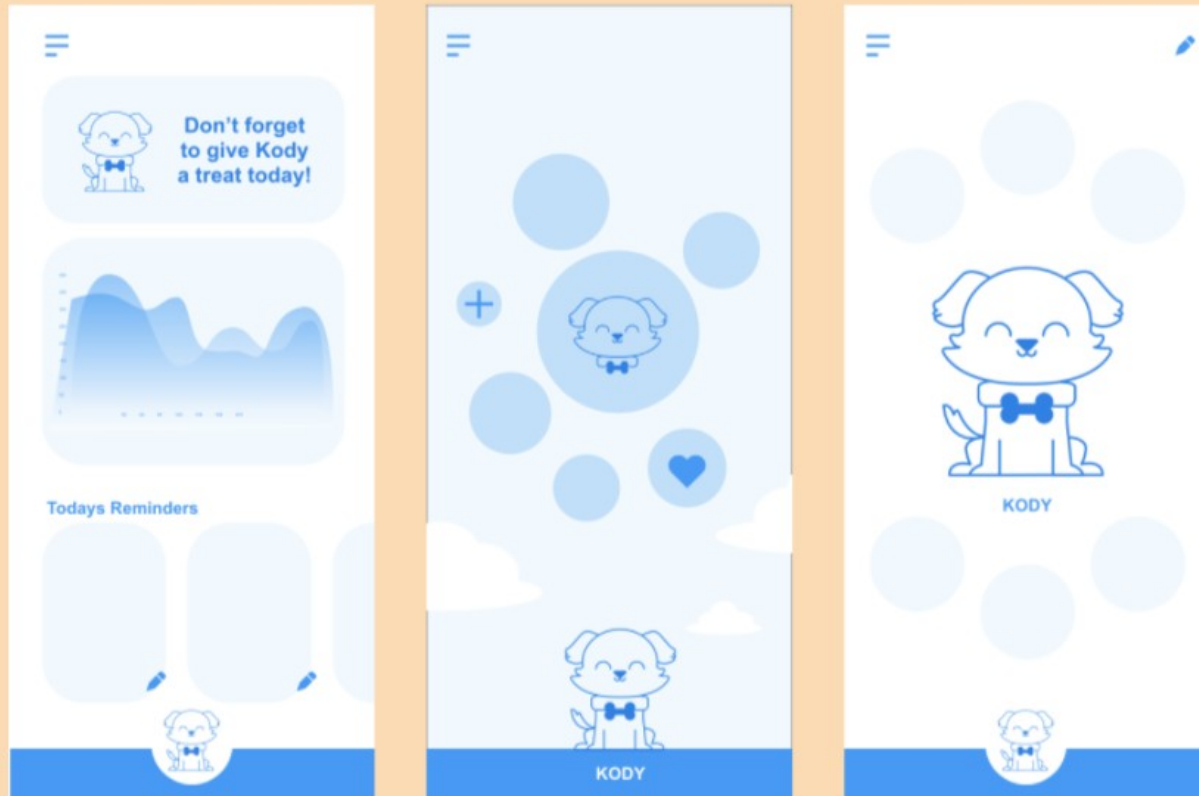

Brainstorming features

Existing Features 8	New Features 21	Prioritized 16

User evaluation

Product Outlook Deck

Survey Outcome

Add a Pet

What they liked

"Can let a lot of pets which is good for owners that have a lot of pets"

"Calendar makes it easy to pick date"

What they didn't liked

"I didn't recognize the switch button" - talking about the switch pet icon on the home screen

User Ratings

★★★★★ 4.75/5

The image shows two mobile app screens for the 'Add Pet' feature. The first screen, titled 'Add Pet What type of pet? Step 1', displays a grid of six pet icons: Dog, Cat, Rabbit, Hamster, Fish, and Bird. Each icon is a cartoon animal with a bow tie. Below the grid is an 'Other' button. The second screen, titled 'Add Pet Add pets information Step 2', shows a form for entering pet details. It includes fields for Name, Birthday, Gender, Sterilised?, Breed, and Notes. A dog icon is at the top, and navigation arrows are at the bottom.

Product Outlook Deck

Survey Outcome

Add an Alarms

What they liked

"Understandable and easy to use"

"Icons are understandable"

"Categories are helpful"

What they didn't liked

"I might mistake the categories for pet tips"

"I prefer to add alarm then only add category"

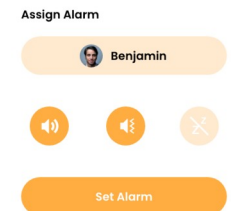

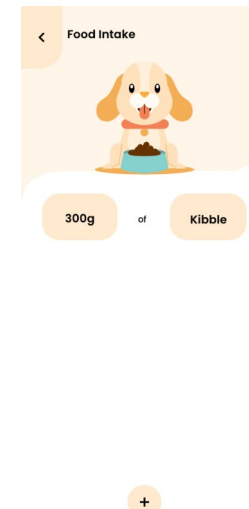

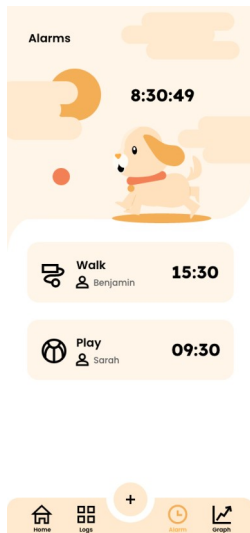

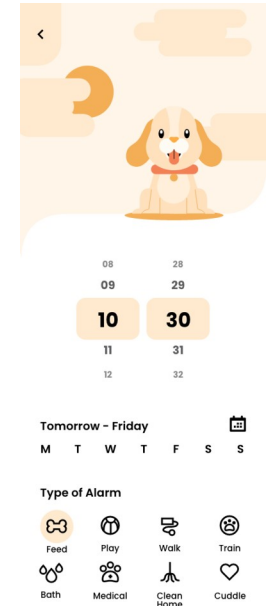

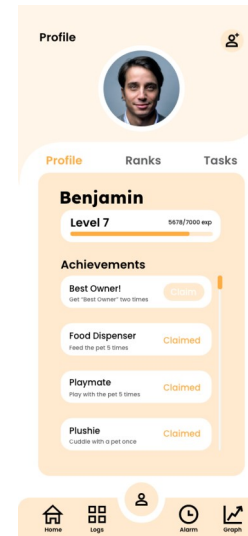

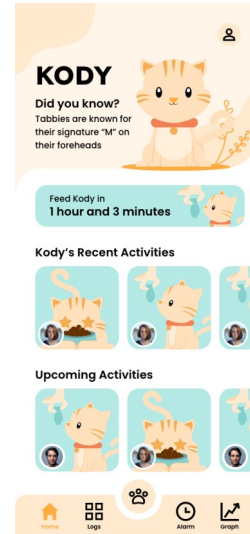

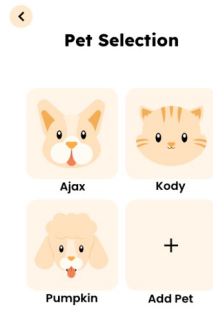

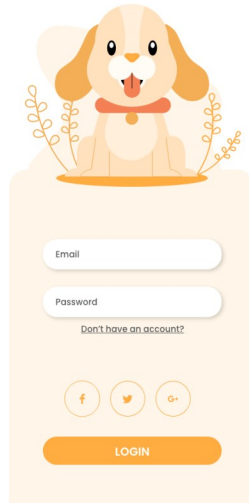

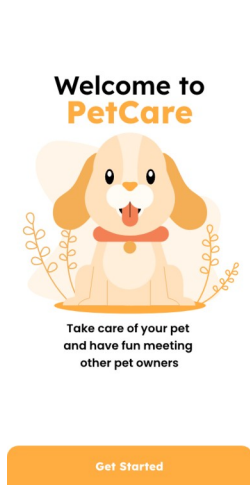

"Categories are not necessary"

User Ratings

★★★★★ 4.5/5

The image shows two mobile app screens. The first screen, titled 'Alarms', has a settings icon in the top right and displays four category buttons: Daily Care (heart icon), Medical (person icon), Hygiene (glasses icon), and Cleaning (spray icon). At the bottom is an 'Edit Alarms' button with a pencil icon. The second screen, titled 'Feeding', has a back arrow in the top left and a dog icon at the top right. It shows a sun icon, a clock face with time slots (08-09, 09-10, 10-11, 11-12), and a 'Set Alarm' button at the bottom. A calendar view for 'Tomorrow - Friday' is also visible.
