Social Computing – Lezione 2

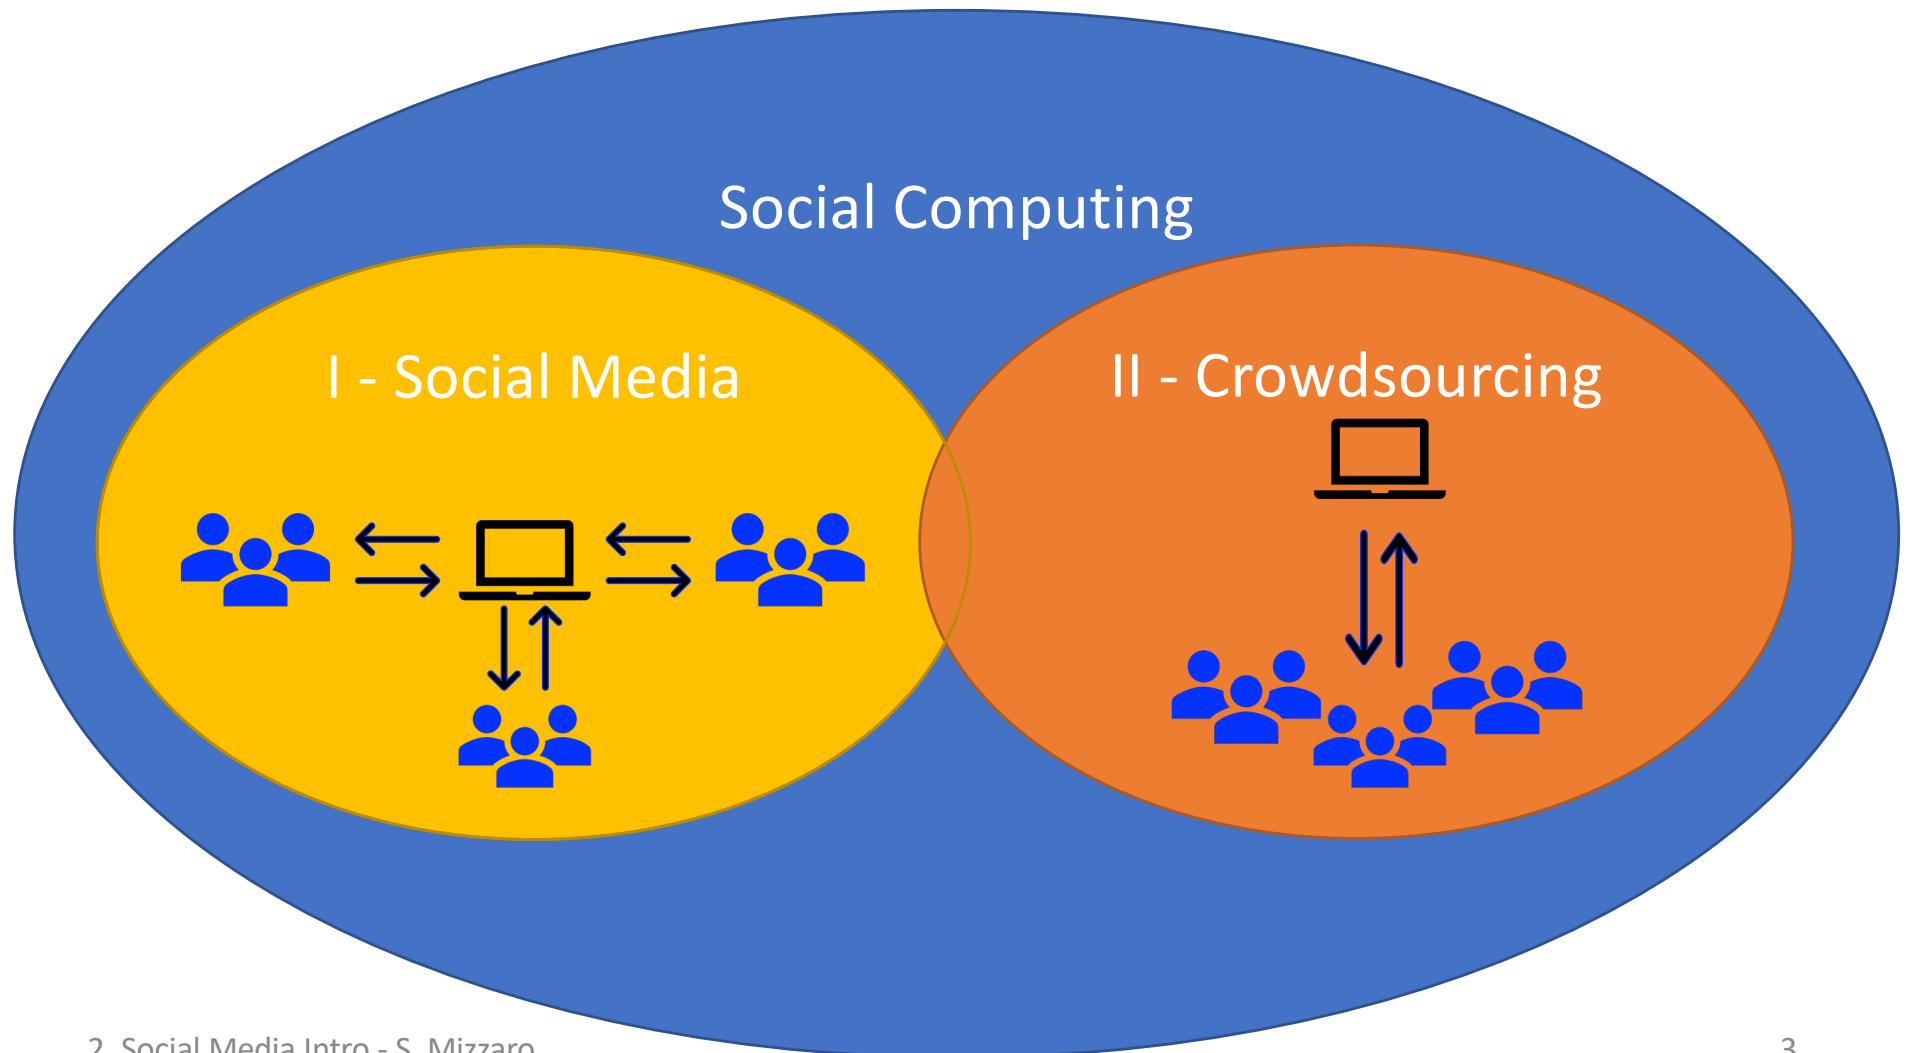

3 Ottobre 2025

Riassunto Lezione 1

- Docenti
- Lezioni (calendario, metodo)
- Esame
- Argomenti
- Motivazioni
- Collegamenti con altri corsi
- Testi e materiale

Riassunto

- Lezione 1: Presentazione del corso

Parte I

- Social media mining
- Reti
 - Misure delle reti
 - Centralità, Pagerank, ecc.
 - Modelli delle reti
 - Random, small world, attaccamento preferenziale,
 - Long tail, invarianza di scala, ecc.
 - Dinamica
 - "Sulle reti succedono delle cose"
 - Diffusione (malattie, innovazione, idee, informazioni, ...)
 - Analisi della rete di Facebook
 - "Fake news" (Disinformazione)
- Non: analisi di testi, NLP, text mining, ...
- + Lab: ~~Twitter API, Tweepy, NetworkX, ...~~
- + Mid-term assignment 1

Parte II

- Crowdsourcing, wisdom of the crowds
- Amazon Mechanical Turk, Prolific
- Human computation
- Esempi
- Accorgimenti per farlo funzionare
- + Lab:
 - Amazon Mechanical Turk e/o Prolific
 - Crowd_Frame, tool sviluppato in lab. da Michael
- ~~+ Mid-term assignment 2~~
- Crowdsourcing & "Fake news"

Il vostro Slido

- "Cosa vuol dire Social Computing?"

Slido 1

- Connessione
- Studio dei dati
- Studiare e lavorare sui dati ricavati dalle grandi aziende che gestiscono dei social media, al fine di rilevare tendenze, informazioni sulle persone quali provenienza, genere, età e così via.
- è la materia che studia il comportamento sociale delle persone nel mondo di internet, trattando informazione e disinformazione
- Come la società venga influenzata dalle nuove tecnologie e viceversa
- Interazione tra dispositivi
- Studio comportamento persone in rete
- Materia che studia aspetti legati ai social come informazioni, utenti e le loro interazioni.
- adattare gli strumenti e i prodotti informatici alle persone
- influenza dell'informatica sulle persone
- relazione tra informatica e società
- cloud
- Fa riferimento a un ramo dell'informatica incentrato sulla comunicazione e condivisione di informazioni tra una rete di utenti
- Il processo che permette di comprendere come si comportano i dispositivi tecnologici in ambienti sociali

- Studio mediante tecniche computazionali di reti sociali
- Interazione
- Lo studio dei social media attraverso l'analisi dei dati che vi si ricavano, in modo da ottenere insight utili su opinioni generali, su provenienza di una popolazione o altre informazioni/aspetti simili
- studia l'interazione tra utenti e il web che utilizzano i social media
- Studiare il comportamento e le abitudini delle persone sui social
- L'uso delle persone per risolvere lavori
- Studio o analisi tra interazioni sociali
- Condivisione
- Informatica
- Società
- Controllo mediatico delle informazioni
- Data mining
- Osservazione dei fenomeni sociali nei social
- Analisi dei dati provenienti dai social
- L'analisi di come le persone si rapportano ai social network
- L'analisi delle reti sociali

Slido 2

- è lo studio, utilizzando anche tecniche di big data, dei comportamenti umani nel web che utilizzano social network, siti web ecc... (7)
- Sfruttare l'informatica per risolvere problemi sociali o rilevare metriche social. (4)
- Tecniche computazionali per studio di aspetti sociali (1)
- Estrarre informazioni derivanti attività su internet per utilizzarle per un controllo mediatico delle informazioni e attività lavorative (0)
- Il social computing studia il rapporto tra informatica e società e come la società contribuisca alla crescita dell'informatica. (-1)
- Pratica di esportare determinato lavoro a persone esterne al fine di raccogliere poi i loro risultati ed analizzarli (-1)
- Tecniche che consentono di raccogliere informazioni e analizzare l'interazione sociale tra utenti. (-1)
- Il social computing consiste nello studio e nella lavorazione dei dati raccolti dalle aziende che gestiscono piattaforme di social media per ricavare insight. (-2)
- Studio delle informazioni e dei dati riguardante le connessioni tra utenti che utilizzano reti (-2)
- modalità e tecniche usate per comprendere gli aspetti sociali degli utenti nel mondo dei social (-2)
- Utilizzare i social e, in generale, ciò che si trova online per studiare e risolvere problemi sociali (-2)
- Studio dei dati prodotti dall'interazione uomo macchina (-3)
- Studio dell'interazione tra utenti nel web (-3)
- Lo studio del comportamento della tecnologia nella società tramite controllo mediatico delle informazioni (-3)

Slido 1 (24/25)

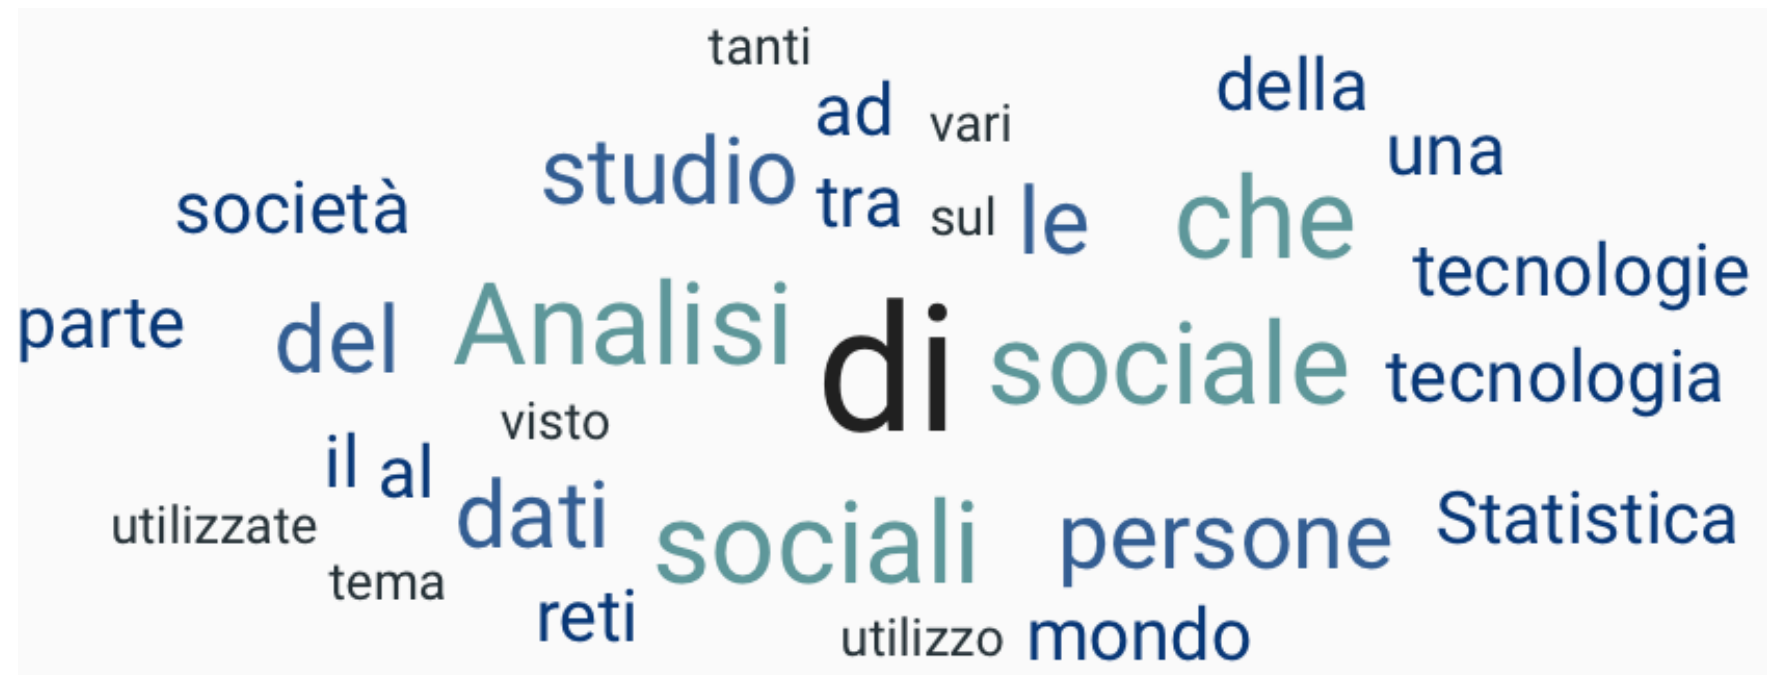

2. Cosa vuol dire Social Computing (di nuovo)?

22 

-  **Anonymous**
9  0  • 30 Sep 2024, 9:11 AM
- disciplina volta a migliorare l'interazione tra le persone con motori di ricerca, social network e siti web
-  **Anonymous**
9  -1  • 30 Sep 2024, 9:11 AM
- L'informatica applicata alla sociologia; l'uso di strumenti informatici per lo studio di gruppi di persone.
-  **Anonymous**
7  -1  • 30 Sep 2024, 9:11 AM
- L'analisi dei metodi di programmazione e utilizzo di applicazioni in ambito sociale e gli effetti che questi hanno sulla società
-  **Anonymous**
5  0  • 30 Sep 2024, 9:12 AM
- Il social computing facilita interazioni tra utenti tramite piattaforme collaborative, analizzando i dati sociali per migliorare comunicazione e condivisione.
-  **Anonymous**
4  0  • 30 Sep 2024, 9:13 AM
- Lo studio delle interazioni tra la società e i mezzi digitali, volto ad analizzare le influenze che occorrono in entrambi.
-  **Anonymous**
3  0  • 30 Sep 2024, 9:12 AM
- Lo studio di come l'informatica si applica alle reti sociali, migliorando l'interazione e studiandone i comportamenti
-  **Anonymous**
6  -3  • 30 Sep 2024, 9:10 AM
- Applicazioni dell'informatica alle reti sociali
-  **Anonymous**
1  0  • 30 Sep 2024, 9:13 AM
- Analisi sociologica degli utenti effettuata su dati collezionati tramite crowdsourcing o disponibili dai social network
-  **Anonymous**
1  0  • 30 Sep 2024, 9:12 AM
- Analisi dei dati relativi ai Social e applicazione nel campo informatico
-  **Anonymous**
1  0  • 30 Sep 2024, 9:11 AM
- Disciplina che si occupa dello studio della società tramite strumenti informatici

-  **Anonymous**
2  -2  • 30 Sep 2024, 9:12 AM
- Studio delle applicazioni informatiche di tipo sociale sull'uomo e di come questo interagisce con esse
-  **Anonymous**
1  -1  • 30 Sep 2024, 9:11 AM
- Analisi dei big data estraibili dai social con lo scopo di migliorare la visibilità, qualità e personalizzazione dei contenuti
-  **Anonymous**
2  -2  • 30 Sep 2024, 9:11 AM
- Studio dell'interazione tra informatica e utilizzatori
-  **Anonymous**
1  -1  • 30 Sep 2024, 9:11 AM
- interazione tra persone e computer e studio dei social media
-  **Anonymous**
1  -1  • 30 Sep 2024, 9:10 AM
- aiutare la società a crescere attraverso la tecnologia
-  **Anonymous**
0  -1  • 30 Sep 2024, 9:12 AM
- Analisi sociali grazie all'uso della tecnologia
-  **Anonymous**
0  -2  • 30 Sep 2024, 9:11 AM
- Studio dell'interazione tra persone e gli elaboratori
-  **Anonymous**
0  -2  • 30 Sep 2024, 9:11 AM
- Analisi di come la rete influenza il comportamento delle persone
-  **Anonymous**
1  -3  • 30 Sep 2024, 9:10 AM
- Interazione tra persone e informatica
-  **Anonymous**
1  -6  • 30 Sep 2024, 9:11 AM
- Interazione tra diversi tipi di elaboratori
-  **Anonymous**
0  -6  • 30 Sep 2024, 9:11 AM
- Analisi delle applicazioni
-  **Anonymous**

Studio del comportamento delle persone online

Oggi

- Introduzione alla parte I del corso
- Obiettivo:
Capire di cosa stiamo parlando / parleremo
- | "Social media":
 - panorama / scenario / sfondo

Scaletta

- Terminologia & Definizioni & Esempi
- Classificazioni
- Storia
- Statistiche

Scaletta

- Terminologia & Definizioni & Esempi
- Classificazioni
- Storia
- Statistiche

Social Media?

- Partiamo dalla Definizione
- Provate voi:
- **Cosa è un Social Media?**
 - <http://slido.com>
 - #5902
 - 2' – 3'
 - potete scrivere delle frasi
 - (al solito "pervertiamo" slido
 - Q&A
 - la domanda non compare)

Elenco di Social Media

- ... 🤔
- Domanda più semplice
- Provate a elencare i Social Media che vi vengono in mente
- Sempre <http://slido.com> #5902
 - 2' – 3'
 - (possibili risposte multiple;
 - un social media per risposta)
- Vediamo la tagcloud

slido

Termini

- Social Media
- Social Network(ing) Services
- Social Network(ing) (Web)Sites
- Social Media Sites
- Social Network
 - Online & Offline
- Social Web
- ...

N.B. Elenco di Social Media?

- Ehm

- https://en.wikipedia.org/wiki/List_of_social_networking_websites
- Sono ca. 250...
- Facebook
- Instagram
- Twitter
- Snapchat
- LinkedIn
- ...

Lust	
Gluttony	Uber 
Greed	
Sloth	
Wrath	
Envy	
Pride	

Definizione di Social Media / 1

- Date:
 - World Wide Web: 1990
 - Web 2.0: dal 2004, nuovo modo di usare il Web: Blog, Wiki, ...
 - Facebook, mySpace... ~2005
- → Definizioni "in itinere"
- [Kaplan & Haenlein, 2010]
- **Social Media** is a group of Internet-based applications that build on the ideological and technological foundations of Web 2.0, and that allow the creation and exchange of User Generated Content.
 - UGC: gli utenti creano i contenuti

Definizione di Social Media / 2

- [boyd & Ellison, 2008]
- We define **social network sites** as web-based services that allow individuals to (1) construct a public or semi-public profile within a bounded system, (2) articulate a list of other users with whom they share a connection, and (3) view and traverse their list of connections and those made by others within the system. The nature and nomenclature of these connections may vary from site to site.

Definizione di Social Media / 2

- [boyd & Ellison, 2008]
- We define **social network sites** as web-based services that allow individuals to
 - (1) construct a public or semi-public profile within a bounded system,
 - (2) articulate a list of other users with whom they share a connection, and
 - (3) view and traverse their list of connections and those made by others within the system. The nature and nomenclature of these connections may vary from site to site.

Definizione di Social Media / 2

- [boyd & Ellison, 2008]
- We define **social network sites** as **web-based services** that allow individuals to
 - (1) construct a public or semi-public **profile** within a bounded system,
 - (2) articulate a **list of other users** with whom they share a **connection**, and
 - (3) **view and traverse** their **list of connections** and those made by others within the system. The nature and nomenclature of these connections may vary from site to site.

Definizione di Social Media / 3

- **Social media** are interactive computer-mediated technologies that facilitate the **creation** and **sharing** of information, ideas, career interests and other forms of expression via **virtual communities** and **networks**.

Definizione di Social Media / 3

- Social media are interactive computer-mediated technologies that facilitate the **creation** and **sharing** of information, ideas, career interests and other forms of expression via **virtual communities** and **networks**.
The **variety** of stand-alone and built-in social media services currently available introduces **challenges of definition**; however, there are some **common features**:
 1. Social media are interactive **Web 2.0** Internet-based applications.
 2. **User-generated content**, such as text posts or comments, digital photos or videos, and data generated through all online interactions, is the lifeblood of social media.
 3. Users create service-specific **profiles** and **identities** for the website or app that are designed and maintained by the social media organization.
 4. Social media facilitate the development of **online social networks** by **connecting** a user's profile with those of other individuals or groups.

Def. per Social Computing "/ 2"

- [boyd & Ellison, 2008]
- We define **social network sites** as **web-based services** that allow individuals to
 - (1) construct a public or semi-public **profile** within a bounded system,
 - (2) articulate a **list of other users** with whom they share a **connection**, and
 - (3) **view and traverse their list of connections and those made by others within the system**. The nature and nomenclature of these connections may vary from site to site.

Def. per Social Computing "/> 3"

- Social media are interactive computer-mediated technologies that facilitate the **creation** and **sharing** of information, ideas, career interests and other forms of expression via **virtual communities** and **networks**. The **variety** of stand-alone and built-in social media services currently available introduces **challenges of definition**; however, there are some **common features**:
 1. Social media are interactive **Web 2.0** Internet-based applications.
 2. **User-generated content**, such as text posts or comments, digital photos or videos, and data generated through all online interactions, is the lifeblood of social media.
 3. Users create service-specific **profiles** and identities for the website or app that are designed and maintained by the social media organization.
 4. Social media facilitate the development of **online social networks** by **connecting** a user's profile with those of other individuals or groups.

Def. per Social Computing

- Concetti importanti
 - Profili / utenti
 - Connessioni, legami
 - Rete, gruppi
- Ci sono vari aspetti. Non è che gli altri non siano importanti, ma noi ci concentriamo di più su questi
 - Ad es., non parliamo del contenuto degli UGC
- Cosa è / non è un Social Media? Non sempre facile distinguere:
 - Social media "puri"
 - Altri siti con componenti di Social Media
 - → Classificazioni

Scaletta

- Terminologia & Definizioni & Esempi
- **Classificazioni**
- Storia
- Statistiche

Classificazioni

- Con così tanti social media...
- ... e con caratteristiche diverse...
- I ricercatori hanno provato a classificarli
 - Raggruppando quelli simili
 - Identificando caratteristiche comuni/importanti

Una prima classificazione

- [Kaplan & Haenlein, 2010]
 - (stesso lavoro di prima)
- 6 categorie "classiche"
- 2 dimensioni
 - Social presence / Media richness:
 - Quanto "sembra che uno sia effettivamente lì"
 - Es.: realtà virtuale, comunicazione sincrona...
 - Self presentation / Self-disclosure:
 - Quanto si rivela di sé stessi
 - Es.: poco su Wikipedia, di più su Facebook

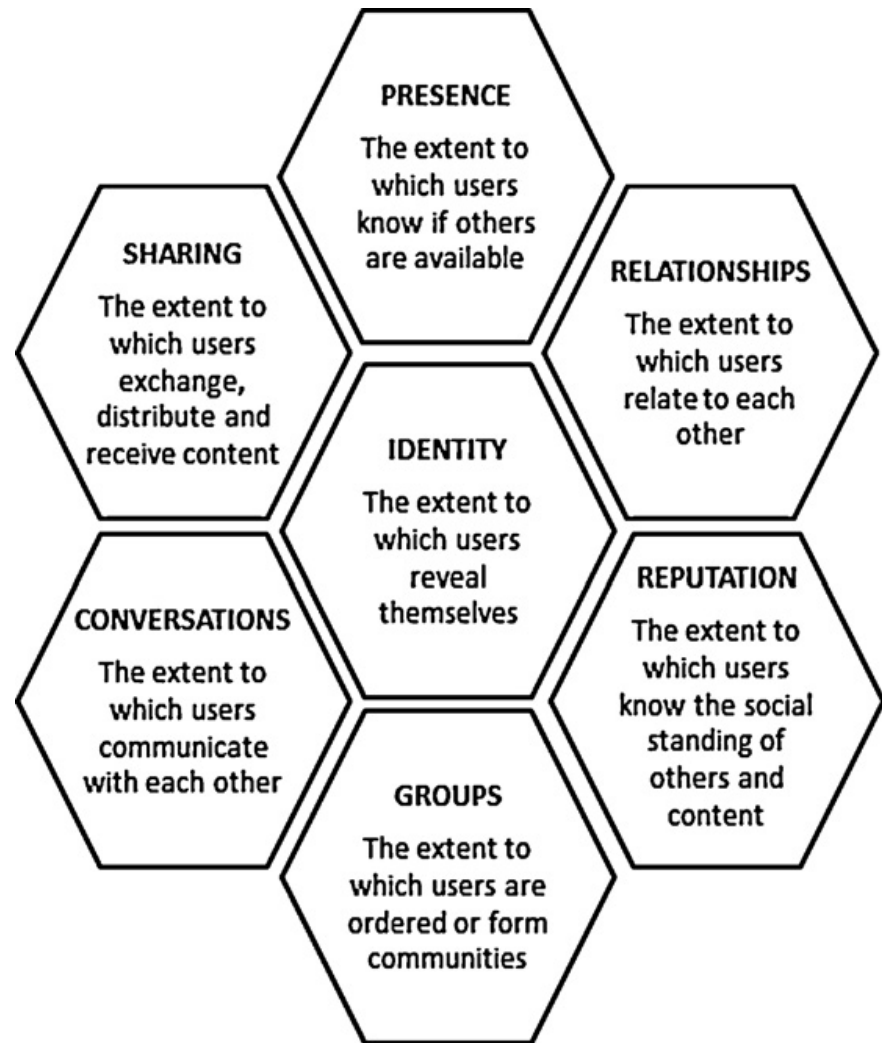

Una prima classificazione

- [Kaplan & Haenlein, 2010]
- 6 categorie "classiche"
- 2 dimensioni

		Social presence/ Media richness		
		Low	Medium	High
Self- presentation/ Self- disclosure	High	Blogs	Social networking sites (e.g., Facebook)	Virtual social worlds (e.g., Second Life)
	Low	Collaborative projects (e.g., Wikipedia)	Content communities (e.g., YouTube)	Virtual game worlds (e.g., World of Warcraft)

Classificazione più... articolata

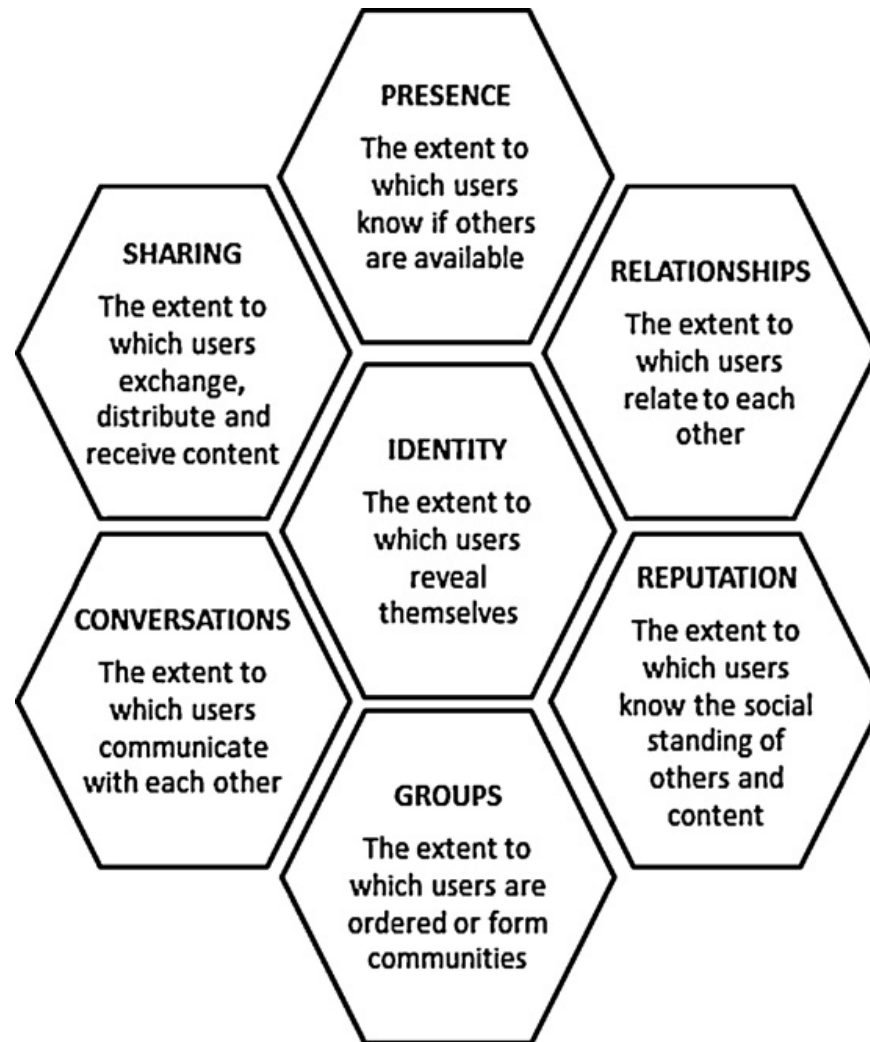

Figure 1. The honeycomb of social media

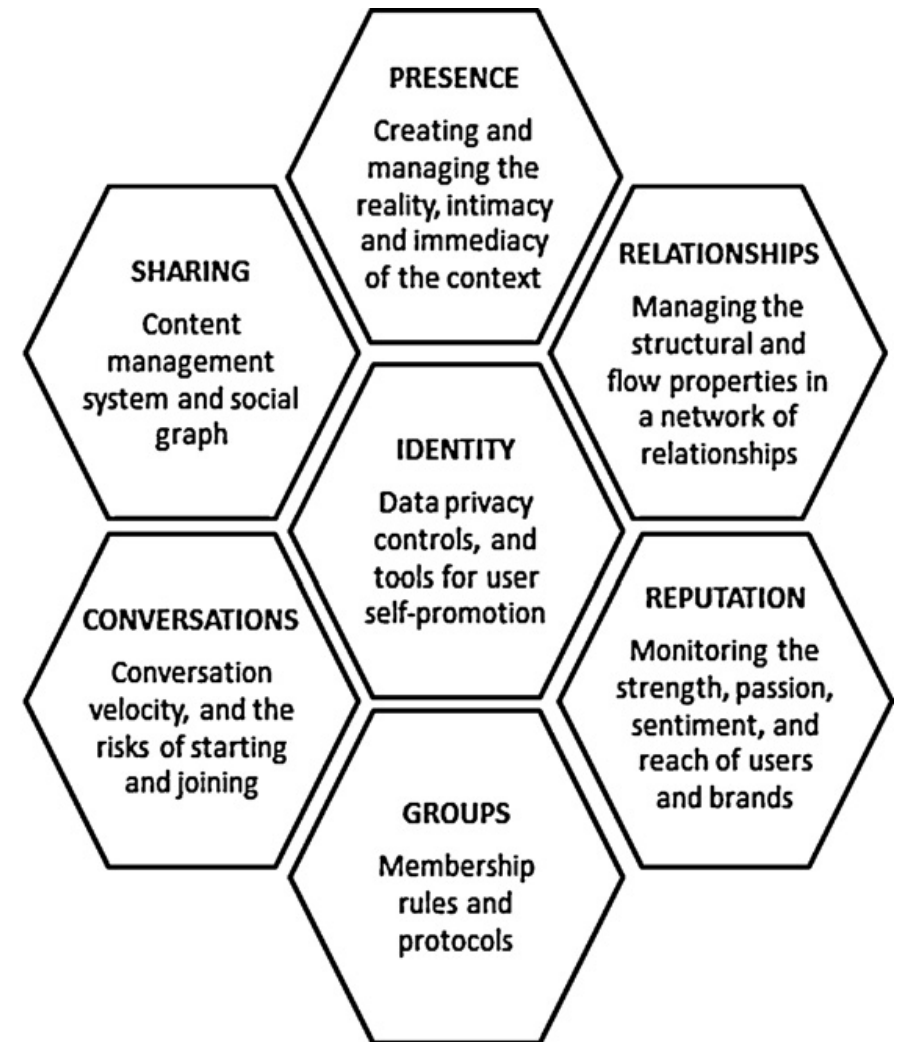

Social Media Functionality

- "Modello ad alveare"
- 7 dimensioni ("functionalities")
- [Kietzmann et al., 2011]

Conseguenze

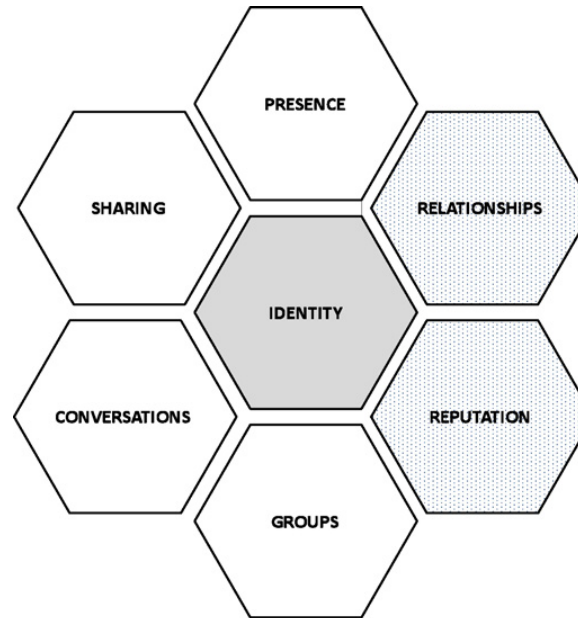

Social Media Functionality

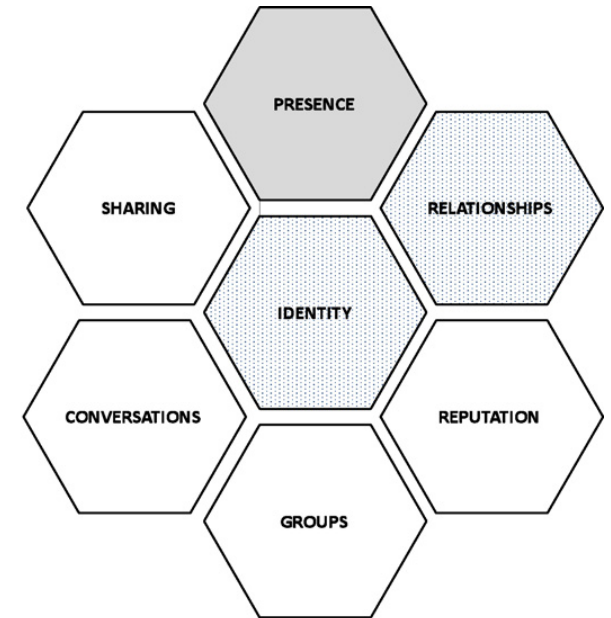

Implications of the Functionality

Figure 2. Contrasting the functionalities of different sites

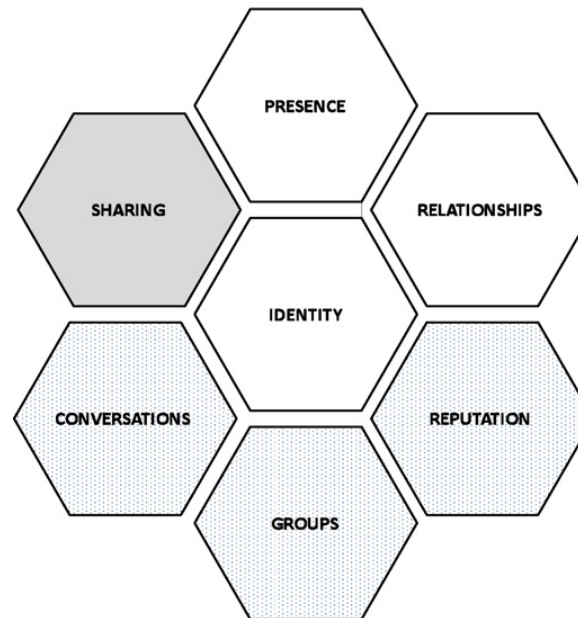

Esempi del Modello ad alveare

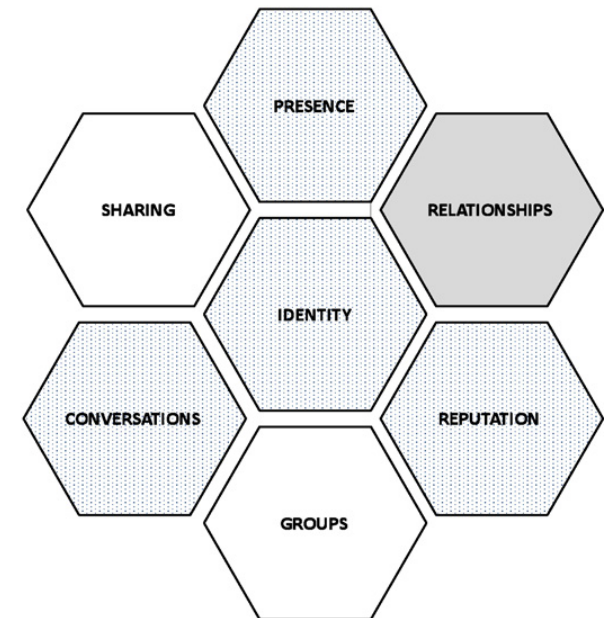

LinkedIn

Foursquare

YouTube

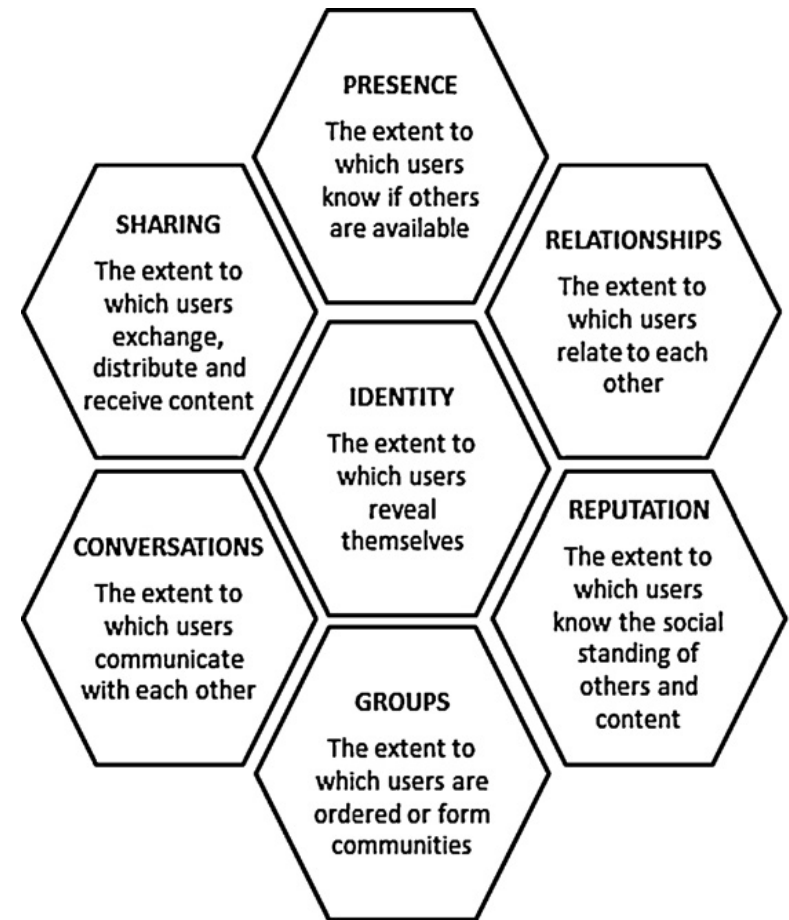

Facebook

[Kietzmann et al., 2011]

Confronto

- Alveare più ricco /dettagliato
- Similitudini:
 - IDENTITY ~ Self presentation
 - PRESENCE ~ Social presence
 - IDENTITY + REPUTATION ~ Self disclosure
 - ...

		Social presence/ Media richness		
		Low	Medium	High
Self-presentation/ Self-disclosure	High	Blogs	Social networking sites (e.g., Facebook)	Virtual social worlds (e.g., Second Life)
	Low	Collaborative projects (e.g., Wikipedia)	Content communities (e.g., YouTube)	Virtual game worlds (e.g., World of Warcraft)

Ah, online!

Differences between offline and online social networking services^[12]

Characteristic	Offline social network	Online social network
Degree centrality	While the number of cognitively manageable ties is limited to about 150 (Dunbar 2003), most people report having 14-56 ties at average (Granovetter 1983 ; van Tilburg 1995 ; Christakis and Fowler 2009)	Huge number of ties technologically possible, but average number is limited, e.g., Facebook: 395 (Tong et al. 2008), LinkedIn: 149 (Utz 2016), XING: 121 (Buettner 2016c), Twitter: 150-250 (Gonçalves et al. 2011 ; Hofer and Aubert 2013)
Symmetry	Usually symmetric (reciprocal behavior, cf. Buettner (2009))	Symmetric (e.g., Instagram , LinkedIn, XING, cf. Buettner (2016d)) and asymmetric (e.g., Twitter, cf. Buettner and Buettner (2016))
Affect	Positive (92-97 %) and negative (3-8 %) tie relationships (Kane et al. 2014) can be managed using high sophisticated coordination mechanisms such as argumentation and negotiation (Buettner 2006a , 2006b ; Landes and Buettner 2012 ; Buettner 2016a)	Except through blocking (e.g., Twitter) or hiding (e.g., Facebook) limited support to deal with negative tie relationships
Strength	2-8 strong ties and 12-48 weak/latent ties on average (Granovetter 1983 ; Christakis and Fowler 2009)	9-37 strong ties and 68-131 weak/latent ties on average (Levin and Cross 2004 ; De Meo et al. 2014 ; Utz 2016)
Dynamic of change	Low due to manual interaction (Freeman 1977 ; Miritello et al. 2013)	High because of technological support (Miritello et al. 2013 ; Kane et al. 2014)

https://en.wikipedia.org/wiki/Social_networking_service

Differences between offline and online social networking services^[12]

Characteristic	Offline social network	Online social network
Degree centrality	While the number of cognitively manageable ties is limited to about 150 (Dunbar 2003), most people report having 14-56 ties at average (Granovetter 1983; van Tilburg 1995; Christakis and Fowler 2009)	Huge number of ties technologically possible, but average number is limited, e.g., Facebook: 395 (Tong et al. 2008), LinkedIn: 149 (Utz 2016), XING: 121 (Buettner 2016c), Twitter: 150-250 (Gonçalves et al. 2011; Hofer and Aubert 2013)
Symmetry	Usually symmetric (reciprocal behavior, cf. Buettner (2009))	Symmetric (e.g., Instagram, LinkedIn, XING, cf. Buettner (2016d)) and asymmetric (e.g., Twitter, cf. Buettner and Buettner (2016))
Affect	Positive (92-97 %) and negative (3-8 %) tie relationships (Kane et al. 2014) can be managed using high sophisticated coordination mechanisms such as argumentation and negotiation (Buettner 2006a, 2006b; Landes and Buettner 2012; Buettner 2016a)	Except through blocking (e.g., Twitter) or hiding (e.g., Facebook) limited support to deal with negative tie relationships
Strength	2-8 strong ties and 12-48 weak/latent ties on average (Granovetter 1983; Christakis and Fowler 2009)	9-37 strong ties and 68-131 weak/latent ties on average (Levin and Cross 2004; De Meo et al. 2014; Utz 2016)
Dynamic of change	Low due to manual interaction (Freeman 1977; Miritello et al. 2013)	High because of technological support (Miritello et al. 2013; Kane et al. 2014)

Riassumendo

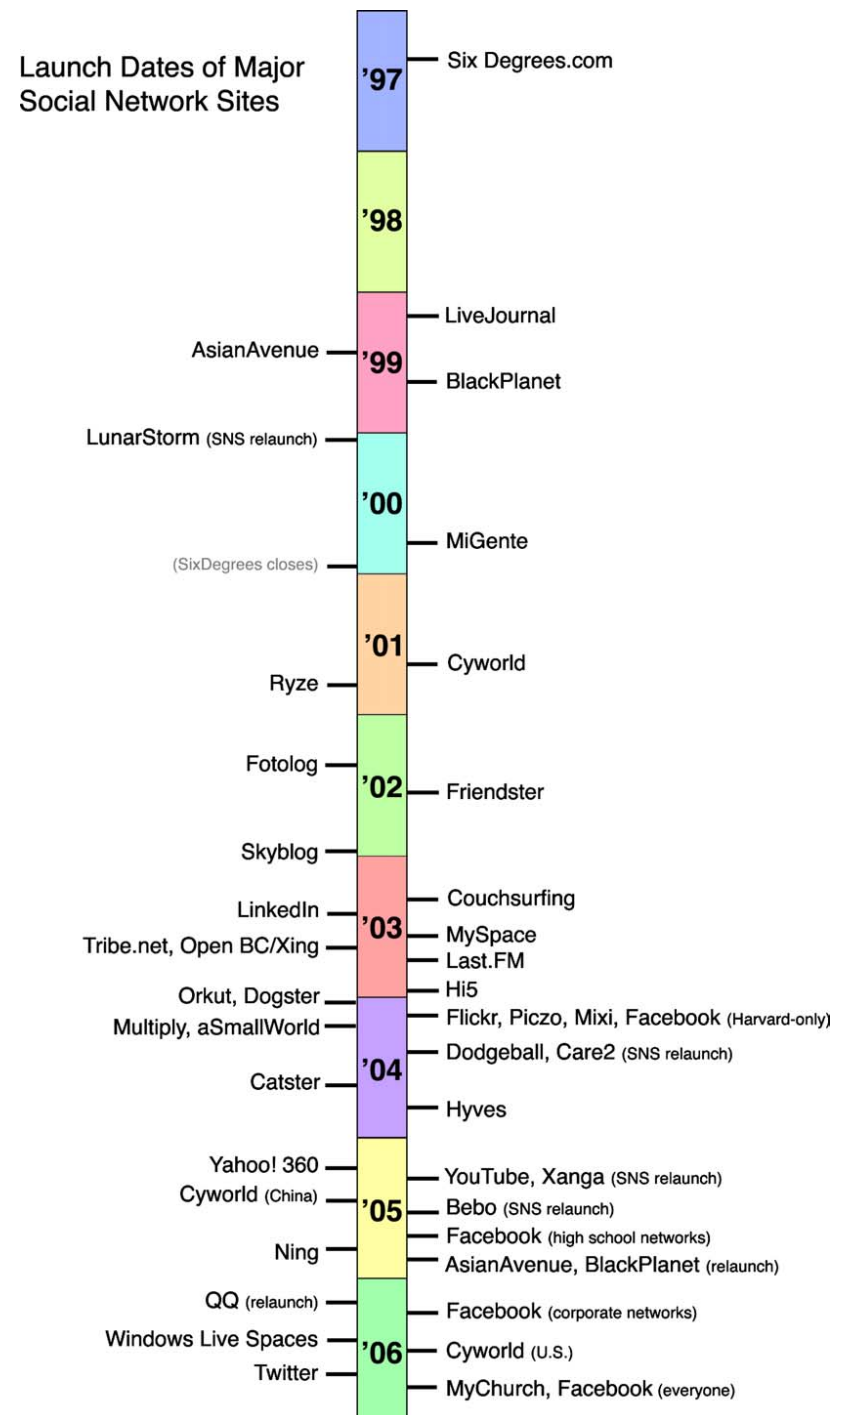

- I social media
 - hanno caratteristiche comuni
 - non sono tutti uguali
- Ci sono vari tipi di social media, e con differenze quantitative e qualitative
- Ci sono anche differenze sostanziali fra
 - i social media online e
 - i legami sociali nel mondo fisico

Scaletta

- Terminologia & Definizioni & Esempi
- Classificazioni
- **Storia**
- Statistiche

Storia

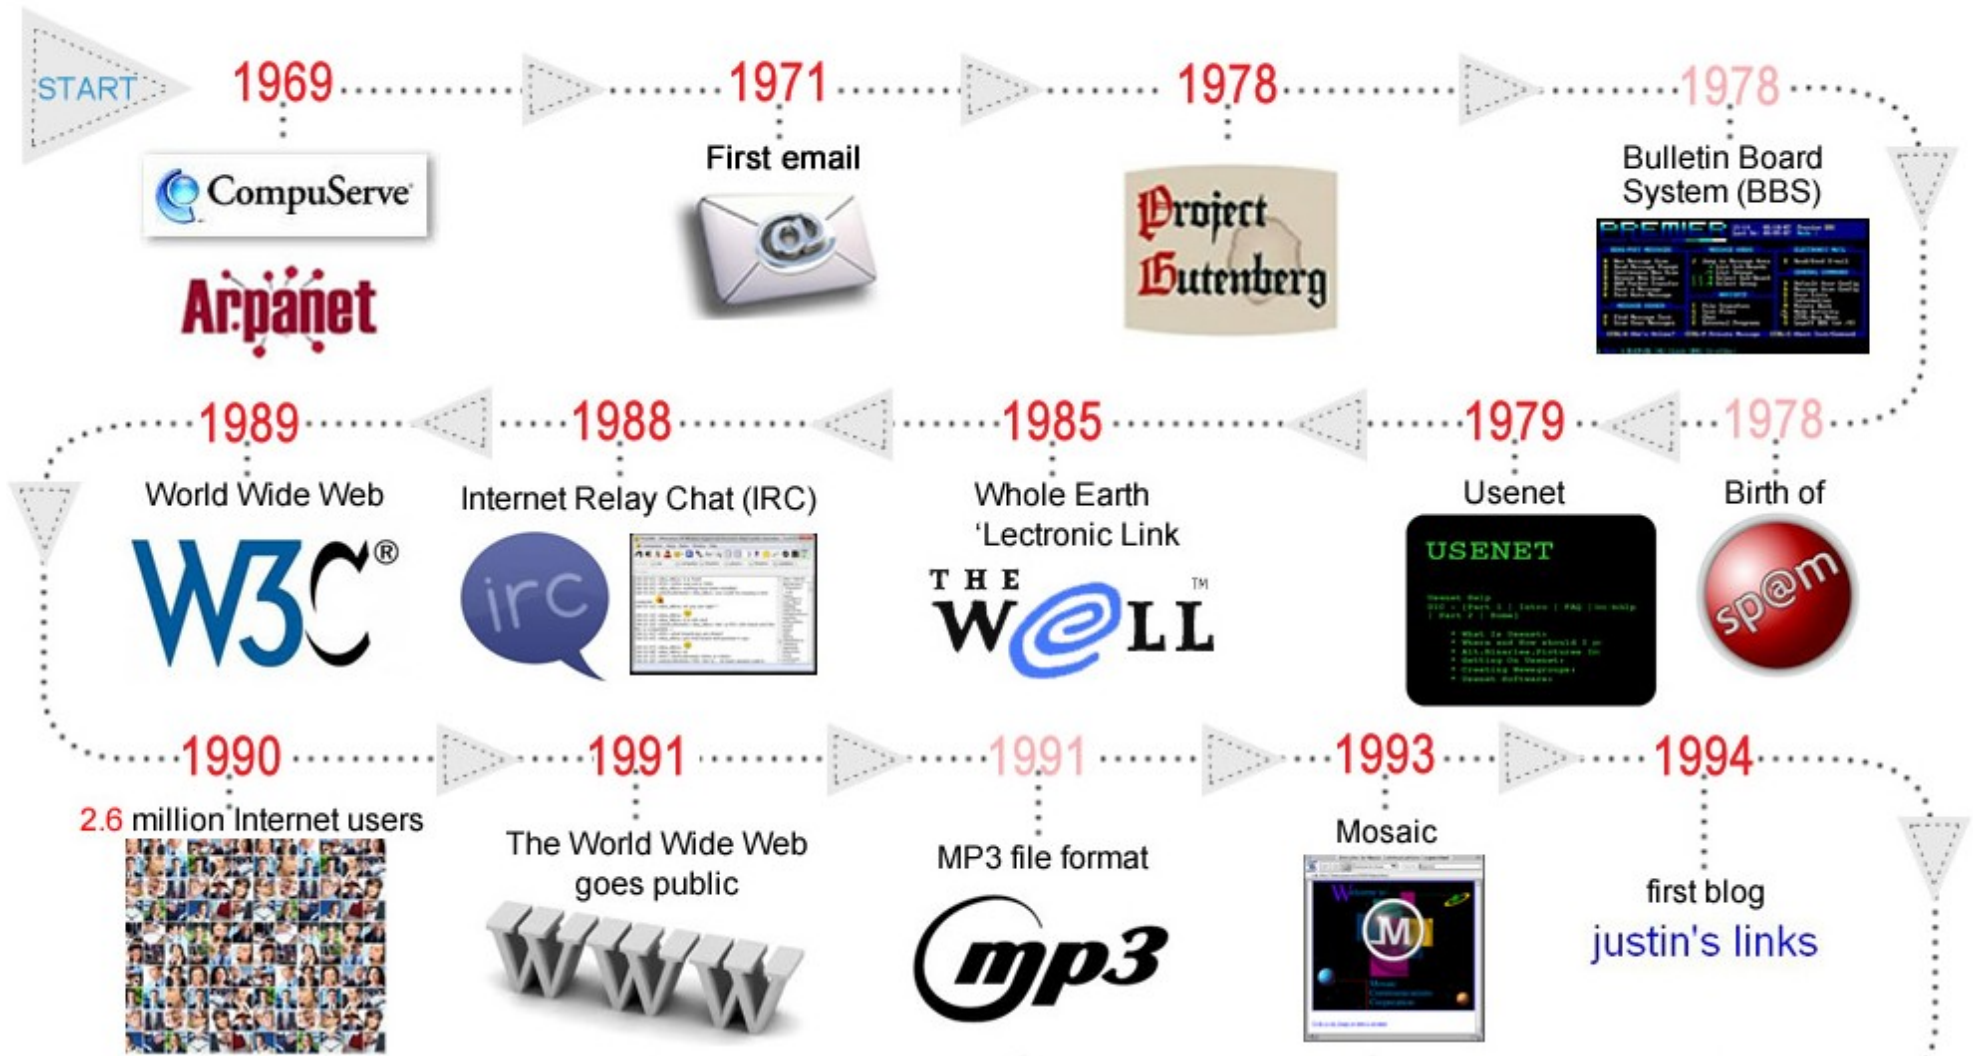

- Sempre da [boyd & Ellison, 2008]
- Il "primo" social media: Sixdegrees.com, 1997
 - Dating
 - Troppo in anticipo sui tempi
 - (cfr. Tinder)

Storia, più dettagli

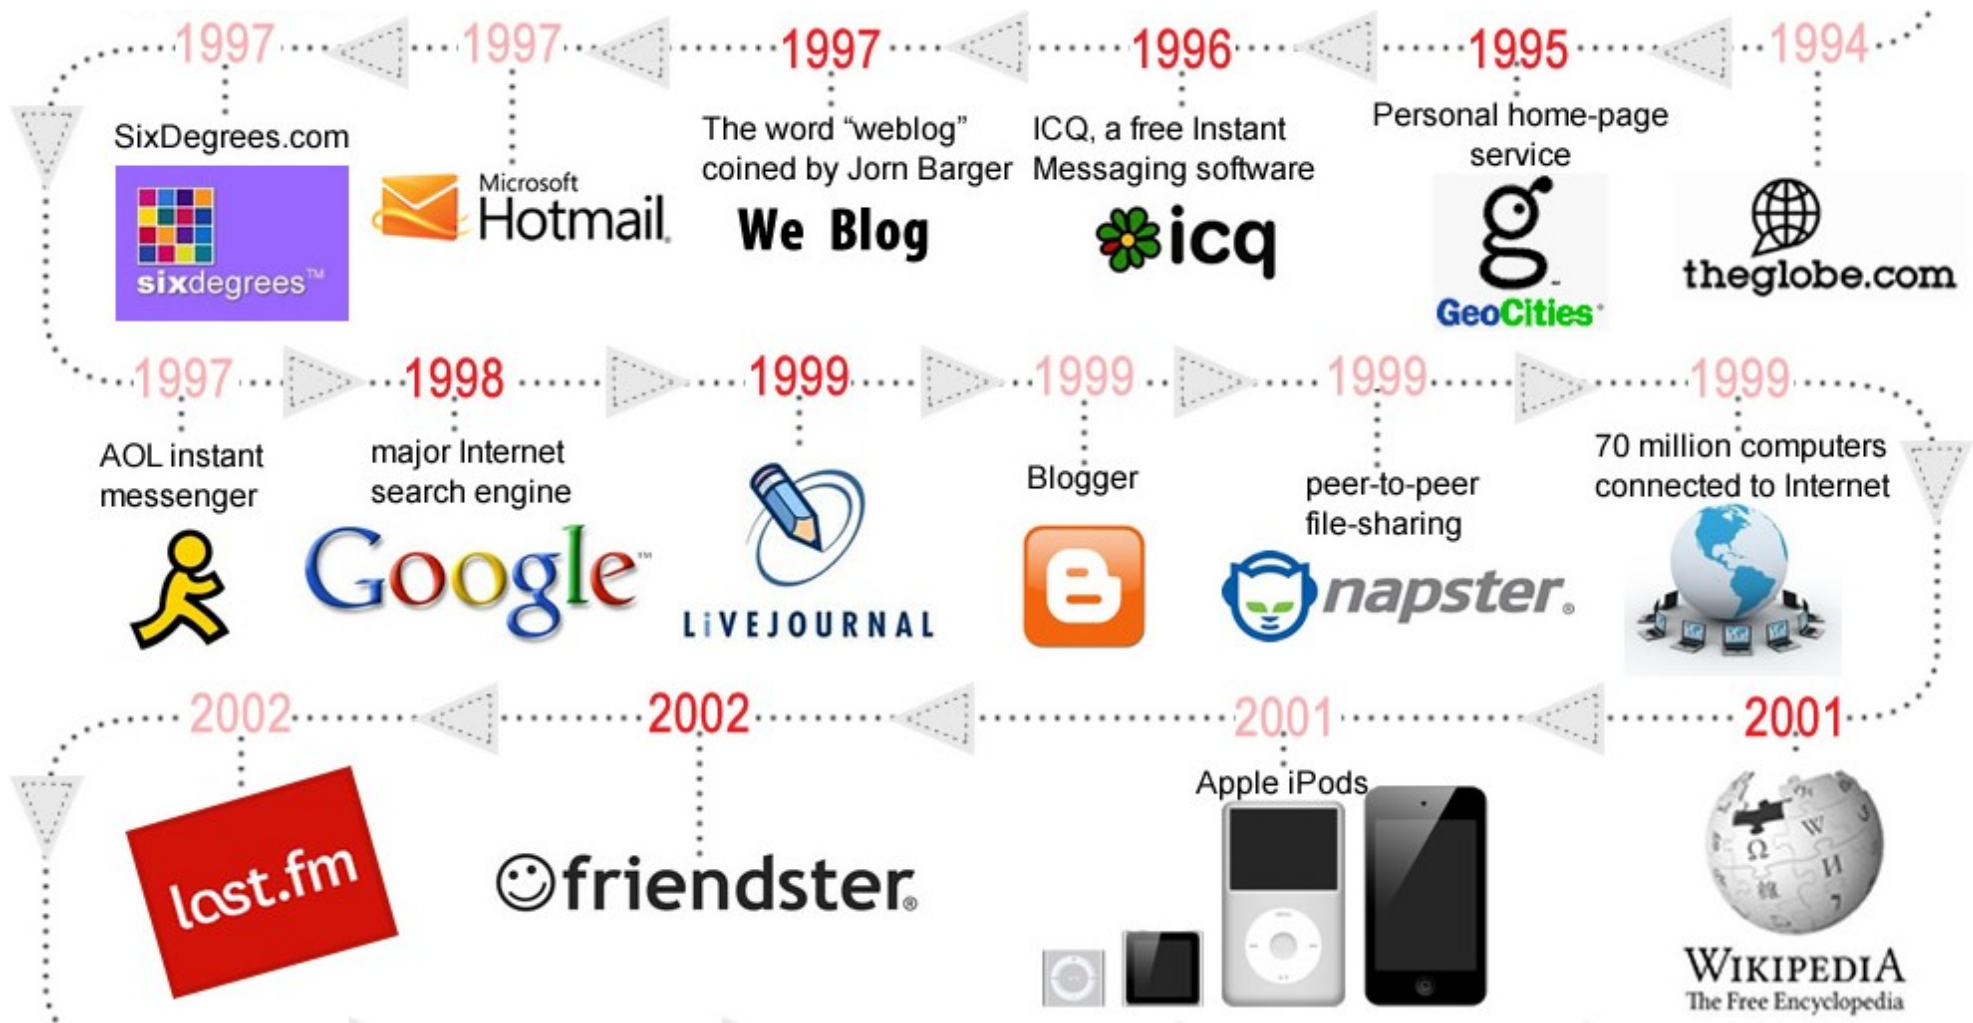

- Alcune slide da [Ceolin, 2016]

1969 - WWW

<http://www.creativeamblings.com/wp-content/uploads/2012/04/style1-1000px-rec7-MILLION.jpg>

1994 – Last.fm

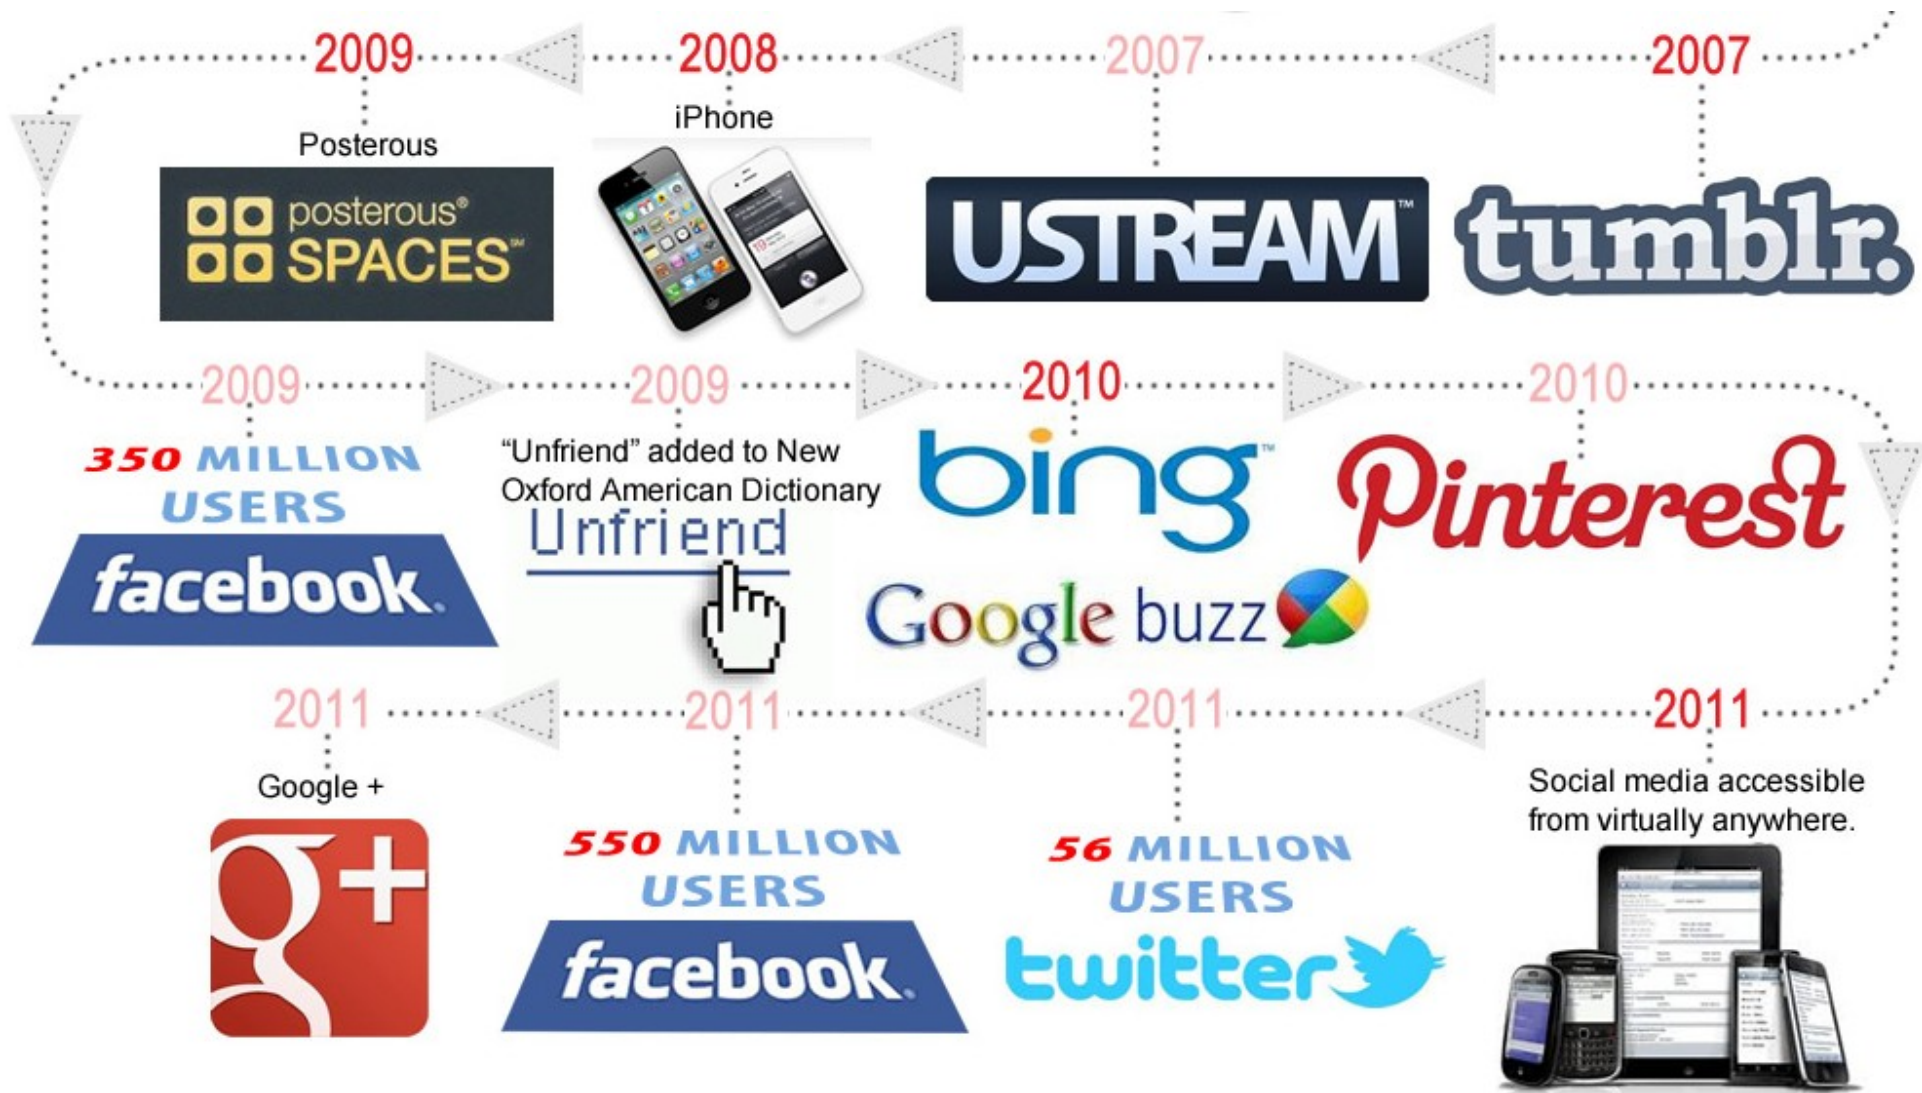

<http://www.creativeramblings.com/wp-content/uploads/2012/04/style1-1000px-rec7-MILLION.jpg>

2003 - Twitter

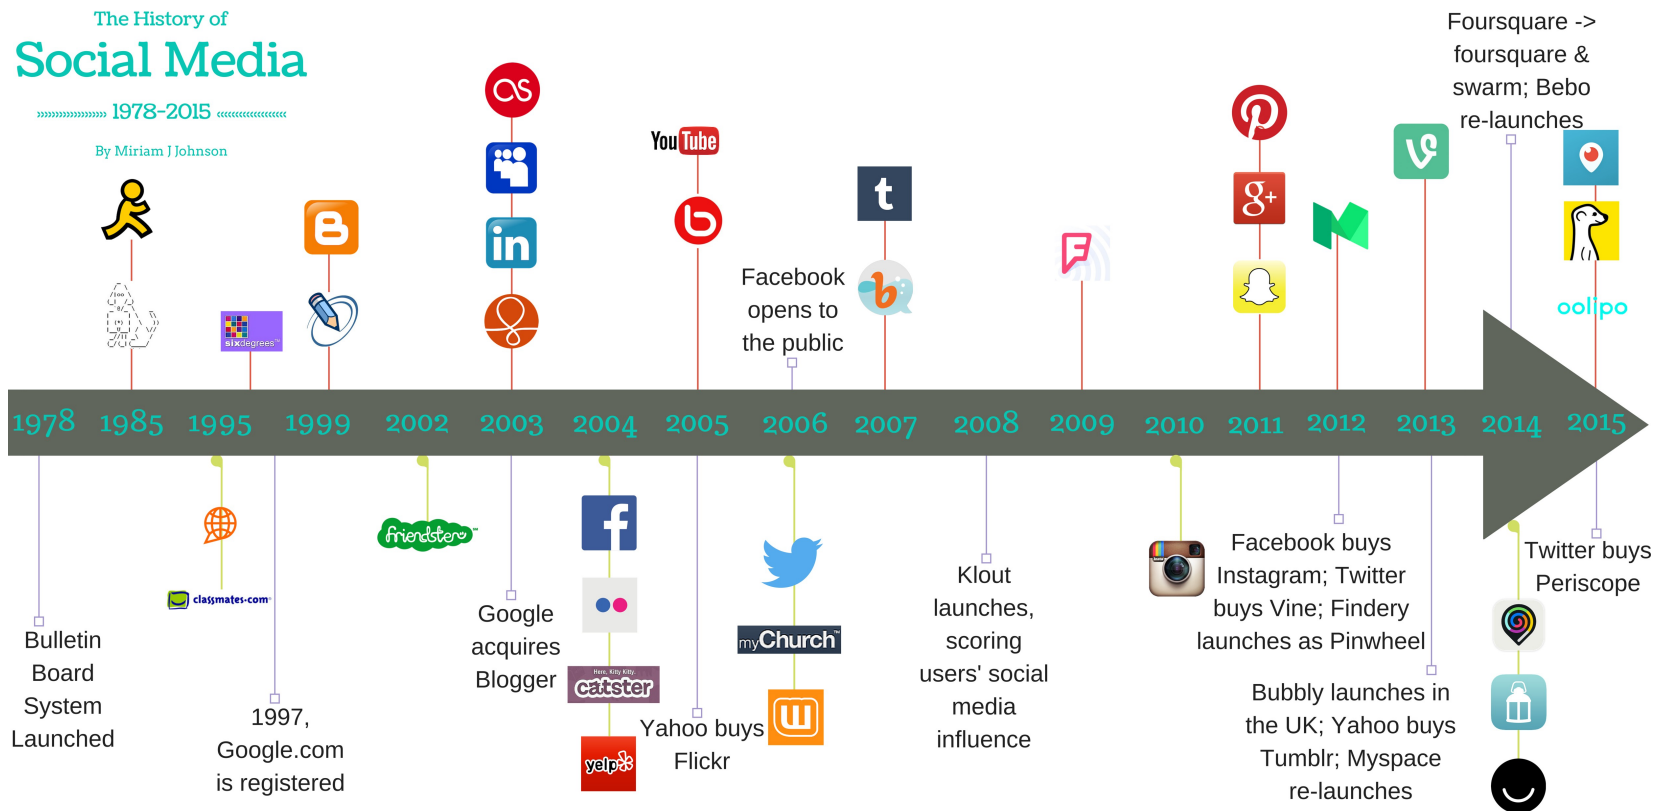

<http://www.creativeramblings.com/wp-content/uploads/2012/04/style1-1000px-rec7-MILLION.jpg>

2007 – Google+

<http://www.creativeramblings.com/wp-content/uploads/2012/04/style1-1000px-rec7-MILLION.jpg>

Highlights

<http://www.booksaresocial.com/social-media-timeline/#lightbox/0/>

Insomma, i Social Media

- Non sono nati dal nulla
- Nascita ~1997, ma crescita significativa ~2005
- Storia ricca e variegata
- Vari tentativi, molti falliti
- Analizziamo di più l'"oggi"

Scaletta

- Terminologia & Definizioni & Esempi
- Classificazioni
- Storia
- **Statistiche**

Perché statistiche?

- Quantifichiamo
- Quanti utenti?
- Quanto importante è il "Fenomeno Social Media", quantitativamente?
- Numeri alti...
- Limitazioni
 - Numeri approssimati
 - "Utenti attivi" (login nell'ultimo mese...)
 - "Identità social" (c'è chi ne ha più di una...)
 - ...

Un po' di statistiche

- Selezione slide da:
 - <https://wearesocial.com/uk/blog/2025/02/digital-2025-the-essential-guide-to-the-global-state-of-digital/>
- Was (2019)

SOURCE: SIMILARWEB. RANKING AND VALUES BASED ON TRAFFIC BETWEEN 01 SEPTEMBER AND 30 NOVEMBER 2024. **NOTES:** VALUES IN THE "UNIQUE VISITORS" COLUMN REPRESENT THE NUMBER OF DISTINCT "IDENTITIES" ACCESSING EACH SITE, BUT MAY NOT REPRESENT UNIQUE INDIVIDUALS, AS SOME PEOPLE MAY USE MULTIPLE DEVICES OR BROWSERS. VALUES FOR "TOTAL VISITS" AND "UNIQUE VISITORS" REPRESENT MONTHLY AVERAGES. FIGURES ENDING IN "B" ARE IN BILLIONS; FIGURES ENDING IN "M" ARE IN MILLIONS; FIGURES ENDING IN "K" ARE IN THOUSANDS. TIME SHOWN IN MINUTES AND SECONDS. **ADVISORY:** SOME SITES FEATURED IN THIS RANKING MAY CONTAIN ADULT CONTENT, VIRUSES, MALWARE, OR OFFENSIVE CONTENT. READERS SHOULD AVOID VISITING UNKNOWN DOMAINS.

Virtual worlds

Abstract The concept of Social Media is top of the agenda for many business executives today. Decision makers, as well as consultants, try to identify ways in which firms can make profitable use of applications such as Wikipedia, YouTube, Facebook, Second Life, and Twitter. Yet despite this interest, there seems to be very limited understanding of what the term "Social Media" exactly means; this article intends to provide some clarification. We begin by describing the concept of Social Media, and discuss how it differs from related concepts such as Web 2.0 and User Generated Content. Based on this definition, we then provide a classification of Social Media which groups applications currently subsumed under the generalized term into more specific categories by characteristic: collaborative projects, blogs, content communities, social networking sites, virtual game worlds, and virtual social worlds. Finally, we present 10 pieces of advice for companies which decide to utilize Social Media.

1. The specter of Social Media

As of January 2009, the online social networking application Facebook registered more than 175 million active users. To put that number in perspective, this is only slightly less than the population of Brazil (190 million) and over twice the population of Germany (80 million)! At the same time, every minute, 10 hours of content were uploaded to the video sharing platform YouTube. And, the image hosting site Flickr provided access to over 3 billion photographs, making the world-famous Louvre

Museum's collection of 300,000 objects seem tiny in comparison.

According to Forrester Research, 75% of Internet surfers used "Social Media" in the second quarter of 2008 by joining social networks, reading blogs, or contributing reviews to shopping sites; this represents a significant rise from 56% in 2007. The growth is not limited to teenagers, either; members of Generation X, now 35–44 years old, increasingly populate the ranks of joiners, spectators, and critics. It is therefore reasonable to say that Social Media represent a revolutionary new trend that should be of interest to companies operating in online space—or any space, for that matter.

Yet, not overly many firms seem to act comfortably in a world where consumers can speak so freely

Social network sites (SNSs) are increasingly attracting the attention of academic and industry researchers intrigued by their affordances and reach. This special theme section of the Journal of Computer-Mediated Communication brings together scholarship on these emergent phenomena. In this introductory article, we describe features of SNSs and propose a comprehensive definition. We then present one perspective on the history of such sites, discussing key changes and developments. After briefly summarizing existing scholarship concerning SNSs, we discuss the articles in this special section and conclude with considerations for future research.

doi:10.1111/j.1083-6101.2007.00393.x

Introduction

Since their introduction, social network sites (SNSs) such as MySpace, Facebook, Cyworld, and Bebo have attracted millions of users, many of whom have integrated these sites into their daily practices. As of this writing, there are hundreds of SNSs, with various technological affordances, supporting a wide range of interests and practices. While their key technological features are fairly consistent, the cultures that emerge around SNSs are varied. Most sites support the maintenance of pre-existing social networks, but others help strangers connect based on shared interests, political views, or activities. Some sites cater to diverse audiences, while others attract people based on common language or shared racial, sexual, religious, or nationality-based identities. Sites also vary in the extent to which they incorporate new information and communication tools, such as mobile connectivity, blogging, and photo/video-sharing.

Abstract Traditionally, consumers used the Internet to simply expend content: they read it, they watched it, and they used it to buy products and services. Increasingly, however, consumers are utilizing platforms—such as content sharing sites, blogs, social networking, and wikis—to create, modify, share, and discuss Internet content. This represents the social media phenomenon, which can now significantly impact a firm's reputation, sales, and even survival. Yet, many executives eschew or ignore this form of media because they don't understand what it is, the various forms it can take, and how to engage with it and learn. In response, we present a framework that defines social media by using seven functional building blocks: identity, conversations, sharing, presence, relationships, reputation, and groups. As different social media activities are defined by the extent to which they focus on some or all of these blocks, we explain the implications that each block can have for how firms should engage with social media. To conclude, we present a number of recommendations regarding how firms should develop strategies for monitoring, understanding, and responding to different social media activities.

1. Welcome to the jungle: The social media ecology

Social media employ mobile and web-based technologies to create highly interactive platforms via which individuals and communities share, co-

create, discuss, and modify user-generated content. Given the tremendous exposure of social media in the popular press today, it would seem that we are in the midst of an altogether new communication landscape. *The New York Times* recently hired a social media editor (Nolan, 2009); the Catholic Press Association (2010) offers a webinar on how the church can use social media; and the Governor of California, Arnold Schwarzenegger, is on Twitter with 1.8 million followers. Even Northwest Organic Valley brand milk cartons now display 'find, friend, and follow us' slogans. But unknown to many, this
